PREFACE

The Baltimore Convention of the Society instructed the Corresponding Secretary in 1909 to prepare a complete catalog of the membership. The Washington Convention in 1911 authorized the printing of the list. The result is this book. The preparation of the record has demanded a large amount of work for which the Society is indebted first of all to the secretaries of the individual chapters. Rapid rotation in office, frequent shifts in the personnel of a chapter, and the lack of permanent records have made it difficult to ascertain accurately some of the important facts in the history of almost every chapter despite the prolonged efforts of the present-day officers and of the resident members. In one case (Ohio) all of the original records were destroyed by fire and in other chapters early record books and papers cannot be found.

The membership list of each chapter is published on the authority of the Chapter Secretary, and each chapter history is signed by him. In addition, I have spared no effort to help make each list complete and to correct all errors. The delays incident to the investigation of doubts arising in reading manuscript and proof have led to the discovery of numerous errors, and have resulted as a matter of fact in demonstrating the omission of some forty names from one chapter list; yet this has postponed the appearance of the book many months. It is too much to hope that all errors have been corrected; for any that still remain I ask the most charitable consideration of all.

By vote of the Washington Convention the list was limited to the membership on December 31, 1911, and each member was to be given the position held at that date. There have been changes, of course, but this book is more than a mere address list, and despite the changes the record indicates closely the present relations of the membership.

The examination of original records and the study of the history of Sigma Xi has proved very interesting to me and I trust the results may appeal to others. This history forms clearly an important part of the movement that has led to a new conception of educational values and a new emphasis in educational work. The men who have been leaders in Sigma Xi have been also prophets of the new education. It is fitting to chronicle their work in the establishment of the organization. But the records are scanty. In spite of extended investigation of all available sources I fear I have not done full justice to some of the men who have

unselfishly devoted time and energy to establish high ideals of scholarship in science. No one can record properly the influence of the army of less conspicuous workers who have contributed powerfully to build up the Society as it is to-day. Sigma Xi itself stands as the evidence of their loyalty to ideals.

To the numerous enthusiastic helpers who have prepared copy, checked lists and data, and done the many other tiresome things which have made this record possible, I wish to express my sincere thanks. To those who are the victims of the errors that still remain, I offer my heartfelt apologies.

HENRY B. WARD.

THE HISTORY OF THE
SOCIETY OF THE SIGMA XI

PART I

FOUNDING OF SIGMA XI

It is scarcely more than half a century since the work of Darwin, Huxley, Pasteur, Virchow, Lister, and a host of able and energetic co-workers forced science upon the attention of the educational world. Men now busily engaged in college teaching were students of Louis Agassiz at Harvard and many more can recall his enthusiastic campaigns for the introduction of actual scientific study into the curriculum of the schools. Many teachers, still young and productive workers, trace their inspiration for biological research to the impulse imparted by Martin at Johns Hopkins. Numberless instances of similar import might be cited from the history of associated fields of scientific activity. The study of science is a thoroughly modern pursuit. In the New World it has not yet surpassed the working period of a single generation.

It is, then, only natural that those movements which have sprung into being as a by-product of the pursuit of science can show only scanty records when tested by the count of years. Phi Beta Kappa was more than one hundred years old before Sigma Xi came into existence. But the latter has now completed a record of twenty-five years and may justly cast up the account in somewhat formal manner, both to preserve the story of these beginnings and to establish the course for future development in the light of the failures and successes of the past. Its source may be traced clearly to the confluence of two streams that, arising, one within the student influence and the other from the teaching circle of a great university, joined at an opportune moment into a current strong enough to cut its way through obstacles and to establish for itself a permanent course. It is appropriate first to chronicle the origin of the movement; then to discuss the evolution of its internal organization; and finally to review its work and the results of its influence so far as they can be ascertained.

To graduate students in geology Professor Henry S. Williams often spoke, as early as 1883 at least, of the need of an honorary society for scientific students similar to Phi Beta Kappa. He discussed this also with colleagues in natural history branches but found one of them so strongly opposed to any organization using Greek letters as its name and others also so antagonistic to recognizing differences in the grade of work prepared by different students that he received scant encouragement for the general plan. As a result he organized in the spring of 1886 a society of geological students to which were elected fourteen members, including some who are now among the most distinguished of present day geologists in this country.

Soon after this Professor Williams, still realizing the need of a society of broader and more general scope, drew up a plan for the

PREAMBLE

If stores of dry and learned lore we gain,
We keep them in the memory of the brain:
Names, things, and facts,— whate'er we knowledge call,—
There is the common ledger for them all:
And images on this cold surface traced
Make slight impression, and are soon effaced.
But we've a page, more glowing and more bright,
On which our friendship and our love to write;
That these may never from the soul depart,
We trust them to the memory of the heart.
There is no dimming, no effacement there;
Each new pulsation keeps the record clear;
Warm, golden letters all the tablet fill,
Nor lose their lustre till the heart stands still.

— *Daniel Webster.*

Friendship in Science. While those whose heart and soul is in their work, are coping with the great problems of Nature, let them remember that the ties of friendship cannot be investigated, but only felt. Let them join heart and hand, forming a brotherhood in Science and Engineering; thus promoting and encouraging by those strong, personal attachments of friendship, the highest and the truest advances in the scientific field. To lend aid and encouragement to those newer brothers, who likewise laboring in the same sphere are aspiring to honored positions. And in collegiate halls to award an honor, which to scientific recipients shall signify, "Come up higher."

Therefore, with these ends and objects, the signers of this paper, do hereby agree to lend their efforts to the establishment of an organization to be publicly known as the

Society of Modern Scientists. The preamble of this organization which is in a sense the forerunner of Sigma Xi, closed thus:

"Therefore we believe it is highly desirable to encourage high attainments among the future students of Cornell University and other kindred institutions by recognizing by some mark of honor those who exhibit special ability in investigating, understanding, and interpreting the facts of nature in the various branches of modern science.

"We believe that this end may be attained by an association of such graduates as understand and thoroughly appreciate these principles, in a society to be known to the outside world by some simple and appropriate badge, who shall from time to time add to their numbers from each graduating class such men as they shall deem worthy to unite with them in elevating the tone of scientific study and encouraging and honoring the scientific scholar."

About the same time, namely shortly before the Cornell Commencement in 1886, two engineers, William A. Day, a Cornell senior, and Frank Van Vleck, Stevens Institute, 1884, the youngest member of the Cornell University faculty, planned* the formation of an honorary scientific society. In the fall they drew into the circle seven others, also all engineering students then at Cornell, and began the work of organizing such a society. They selected the name Sigma Xi, published a constitution, and had begun to keep formal records of their proceedings. The aims and ideals of the new organization are well indicated by the preamble of the first printed constitution, which is reproduced here on the opposite page.

It will be noted that this was issued before Professor Williams became connected with the organization and that the intention of making the society "a brotherhood in Science and Engineering" was expressed in words at least. Yet the membership and its activities gave reason for the conclusion expressed by many in contact with it at the time that this was strictly an engineering society.

It was inevitable that the two movements thus independently started should soon come in contact, and when Professor Williams endeavored to interest some of the engineers in his plan he learned of the movement that had been inaugurated and was brought into intimate touch with its founders. Enthusiastically he at once suggested broadening the scope of this organization so as to make it a University society and to include in it all science students worthy of membership. Finding his proposal was favorably received he generously dropped his own movement, feeling that the Sigma Xi would be a better working nucleus since its

*"You may remember Wm. A. Day '86. He and myself were just before the '86 Commencement slowly toiling up the hill from town when he suggested to me the idea of a scientific Phi Beta Kappa. The thought of it at once impressed me, and we then in a way reviewed the field and the methods of organization. Together we went to my room, and before we parted we had the whole plan of organization formulated and a definite plan of campaign outlined. The following Fall we called together the gentlemen whose names now appear on the list of charter members, and with that band pushed out and achieved a success which has almost astonished the original projectors."

(Private letter from F. Van Vleck, dated Los Angeles, 1892.)

formal organization had proceeded further than that of the Society of Modern Scientists. How very early this was in the history of Sigma Xi appears from the original minute book of the Society, which records that at the second formal meeting, not dated, the proposals of Professor Williams were accepted and at the fourth meeting, also undated, he was enrolled as a member.

Among the group of engineers the leader was undoubtedly Frank Van Vleck, a brilliant young instructor in Mechanical Engineering. He was in fact the only one of that group who was not still a student. By force of character and devotion to the idea he aroused an enthusiastic interest in the plan and spent much time and energy in working out the details of the organization. The breadth of view and catholicity of spirit which characterized the group that Van Vleck brought together is thoroughly evidenced by its reception of the idea of a greater society laid before it by Professor Williams. It was this power to grasp a greater idea and to work for its achievement that brought for their organization that success which had been sought but not found by earlier enterprises. As the first brief history of Sigma Xi says:

"The movement looking toward the organization of a scientific honorary society in colleges is not new. At various times it has been proposed and in one or two institutions societies have been formed. One of the proposals emanated from Rochester University, and it is believed that a chapter was formed there. With the idea of obtaining the co-operation of scientific colleges generally, correspondence was opened with the heads of the principal scientific institutions. It appeared that all were in the main favorable to the idea, but yet active efforts never seem to have been put forth to establish any of these proposed and possible chapters. Then later, the proposing body at Rochester seems to have disappeared altogether."

At the fifth meeting, undated but probably in the early winter of 1887, the Union Chapter was formally admitted and a committee of two, Professor Williams and Mr. Berger, was appointed to consider the establishment of a chapter at Yale. Professor Williams was also the first president elected by the Cornell chapter on May 20, 1887. Other facts tend to show distinctly that he was called into a position of leadership in the new organization. Of course, in that he remained on the ground, he enjoyed a great advantage over others of the founders, since he was able to foster and guide the movement in its formative period of growth. In fact Professor Williams was considered as one of the founders of the Society and is listed as such in the second publication it issued, where his name is signed to the same preamble and statement of aims that appears in the earliest edition already mentioned.

Professor Williams became at once the prophet of the new movement and gave voice to its spirit in his inaugural address. This was reprinted as a pamphlet entitled "The Ideal Modern Scholarship," and designated as the presidential address delivered at the inauguration of the Alpha Chapter of the Sigma Xi Society, Cornell University, Ithaca, New York, June 15, 1887. It must have been a critical moment for

the young organization, and a commonplace statement of its ideals would have resulted in its being assigned a place beside the numerous other organizations in university life that come into notice and as soon pass out, or persist if at all in unimportant mediocrity. But this was a challenge, bold, dignified, quiet, and unanswerable. It appealed powerfully both to mind and heart; it was the call to arms. This document is so fundamental to the history of Sigma Xi that it is impossible to refrain from quoting briefly some of its most striking passages.

"We meet to-day to inaugurate a new ideal of scholarship; * * * a new ideal, not a scholarship: for we have many scholars of this modern sort to whom we may look up as our models, but to lift this modern scholarship to a place of first rank; to make it the ideal for ambitious students; to make the attainment of it an honor to be coveted beyond others; this has not before been attempted in the history of American universities.

"The old ideal, before the mind of the literary scholar, contemplates such a training of the intellect and such an acquirement of learning as shall fit the scholar to grasp quickly, accurately, and thoroughly knowledge bound up in the literature of the world, together with the power to communicate it readily, vividly, and forcefully to his fellows. This is the ideal which most students aspire after * * * and it is reasonable to ask why should anyone propose another? * * * We propose a new ideal because we * * * would follow the spirit of that scholarship, the letter of whose law binds and excludes us. * * *

"I cannot do better than express * * * what we conceive to be the essence of the scholarship which it is the purpose of our society to recognize. * *

"The first element in scholarship is learning. The real scholar sets before himself * * to know everything of something and something of everything. But the something, as well as the everything, changes * * The learning which yesterday made the scholar is ignorance to-day. The spirit of scholarship, then, demands * * modern learning. The old scholarship taught us to reverence the knowledge recorded in books; * * in the course of time, thus, authority came to be respected more than accuracy and imitation of the ancients received higher honor than adaptation to modern conditions. The modern scholar seeks knowledge as a means toward the vigorous expression of his manhood, a knowledge * * of those seething elements in the midst of which he lives, and of which he is one. * *

"The second element essential to the scholar is power of communication with his fellows. * * He must have acquired a thorough familiarity with his own language as a vehicle of thought, but besides this he must be able to use German and French; with these he can reach the civilized world.

"Thirdly, he must be a specialist. In his specialty he must think for himself, plan for himself, act for himself. Here he must rest on no one, but be himself a support for others. He must be a constant student, constantly advancing, and, making stepping stones of his dead self, rise to higher things.

"Such are a few of the elements of that scholarship which it is the

purpose of our society to recognize, foster, and develop. * * In lighting your torches we bid you light them at the brightest living altars of learning, and not at the smouldering coals of dead issues. * *

"He who only imitates the past forgets the demands of the present, * * but he who adapts himself best to modern issues, who serves best the present age, has been, will always be the successful man."

At the fifth meeting the Society thus reorganized made its first elections to membership, choosing four members of the Cornell faculty, viz., Professor R. H. Thurston, J. H. Comstock, W. R. Dudley, and C. D. Marx, together with five graduate students, Messrs. C. S. Prosser, E. H. Preswick, A. W. Smith, F. W. Simonds, and H. E. Summers.

The sixth meeting, which was the first to be dated and was held May 20, 1887, was presided over by Mr. Van Vleck, who seems to have been chairman of the Society up to that time. The final establishment of chapters at Union and Rensselaer was reported and as the first set of officers were elected the following: President, H. S. Williams; Vice-President, F. Van Vleck; Recording Secretary, C. D. Marx; Corresponding Secretary, C. B. Wing; Treasurer, A. W. Smith.

It is said that from the first the founders expected that women would be admitted when the Society should become firmly established, yet it was not until the end of 1888, that any were actually elected. At the previous meeting, which was the thirteenth of the Alpha Chapter, a motion was passed instructing a committee "to look over the list of graduates and present at the next meeting for the election of members the names of such persons as they deem desirable."

This committee reported at the fourteenth meeting on December 5, 1888, thirty-nine graduates among whom were the following five women: Mrs. Anna Botsford Comstock, '76; Mrs. Susanna Phelps Gage, '80; Mrs. Harriet Grotecloss Marx, '84; Miss Julia Warner Snow, '88, and Miss Mary Margaretta Wardwell, '88. The first woman chosen from among the undergraduates was Miss Elizabeth Harwood Boynton, a senior, now Mrs. F. V. Coville, elected at the meeting of May 13, 1889. The movement thus started does not seem to have met with unanimous approval since at the first general convention, May 17, 1893, one chapter proposed an amendment declaring women ineligible to membership in Sigma Xi. This proposal met with little favor and since then no one has questioned the policy of Sigma Xi in offering membership on equal terms to men and women.

GROWTH OF THE SOCIETY AND FORMATION OF CHAPTERS

When in 1893 the Society held its first general convention, it enrolled only four chapters. The results of six years' work appeared very meager. The Society had been conspicuously started upon its public history and the outlook in 1887 was commented upon in most sanguine terms by the Cornell student paper. It had found a leader, it had set up an ideal and that ideal had been approved. Inquiries had come from other institutions regarding the new movement. Permits for the establishment of six other chapters had been sent out from the Alpha Chapter and tentative plans had been laid for the organization of still other chapters. All this had come to pass within a single year. But here the movement seemed to pause.

Two years more passed by and the situation was unchanged. The enthusiastic and vigorous opening of the campaign had not been followed by a corresponding extension of the Society's influence. Indeed it seemed as if the movement had suffered a distinct setback. Two of the chapters which had been established went out of existence almost immediately and others to which chapter letters had been assigned never even completed their formal organization. The Society was restricted to a single state and embraced only one institution of such numerical strength that it could exercise any considerable outside influence, while other institutions of similar numbers and rank had refused to become associated with the undertaking. It looked as if the time were not ripe for such a movement, and even the leaders wondered if the new ideals were really to find a place in the educational system.

In 1889 Kansas was voted a charter. This was a start in a new field, but even after that step was taken it led to no further development for several years. The first general convention in 1893 found the Society of the Sigma Xi still consisting of three chapters in New York State and one in the west. This convention organized a standing committee on extension and spent much time in discussing the policy of the Society. The next two years were characterized by great activity, but it was almost purely internal. When the second convention assembled in 1895 the chapter roll had been increased only by the addition of a single new name, that of Yale, admitted in March of that year. The correspondence of these two years still preserved in the archives of the Society shows that inquiries concerning the aims of Sigma Xi and petitions for the establishment of new chapters had come in numbers. The idea was spreading and new centers wished to join in its propagation. But the leaders in the organization were alive to the dangers of the situation and aware of the ease with which a false move might be made. As one of them wrote: "I would like to see new chapters added, but after our experience * * I am in favor of moving slowly. Our policy should be in the direction of first establishing chapters in the best institutions where they will receive the active support of men who are of recognized standing."

In 1894 an attempt was made to organize in the Sheffield Scientific School at Yale a society to promote a high standard of scientific work. Professor Williams, who was then on the Yale faculty, heard of the movement and called the attention of the movers to the similar organization already firmly established at Cornell. At that time he found five Yale men on the roll of the Sigma Xi: Anthony, Bedell, Crehore, Eddy, and himself. On discussing the matter with the students and faculty, Professor Williams soon discovered that the desire to secure recognition for members of the Scientific School from Phi Beta Kappa had long been prominently on their minds; and appreciating that under these conditions their interest and support would be at best divided, he advised that Sigma Xi discourage any advances at that time. The class of 1894 was unable to agree on any plan of action and the matter was left undecided.

The correspondence of this period shows that the chapters of Sigma Xi were favorable to the establishment of a chapter at Yale, but only

provided that the support of the best men there could be secured so as to insure the success of the movement. The matter lay dormant for a year and was reopened by the publication in February, 1895, of an editorial in the Yale Scientific Monthly entitled, A High Stand Society in Sheff, from which the following may be quoted:

"For a number of years there has been a growing recognition of the need of a high stand society in the Scientific School. So strong was this feeling last year that a serious effort was made by '94 S. to organize one, but they were unable to carry their plans into execution before graduation. An indifference to high scholarship is far too prevalent, and any society which by high standards of admission and by development of its members should encourage a better standard of work would be an invaluable force in the Scientific School. * * *

"It would, therefore, appear that the best results would be obtained through a society formed somewhat on the same lines as Phi Beta Kappa, but with a distinctly scientific basis, whose object should be the promotion of original investigation. In organizing such an association it would be well to look around somewhat. There is a society, Sigma Xi, of just this nature existing in Cornell, Stevens, and other scientific schools, which was founded in 1886 by a Sheffield graduate, Prof. H. S. Williams, '68, now professor of geology at Yale, and which deserves careful consideration. * * *

"The principles on which Sigma Xi is founded seem to us to be sound and have succeeded where they have been put in operation. It would be well for us to profit by their experience if such a society should be organized at Yale. Whether it is best that this should be local is open to argument. Sigma Xi is sure to succeed and to grow. If it does, the same reasons which make Phi Beta Kappa valuable: its fame, its high standard, and general acceptance, will be increasingly applicable to the Scientific Society as well, and would year by year make it more valuable than a local organization. If, as we understand, they will meet us half way, would it not be well to inquire into the advisability and possibility of establishing it in Yale?"

This editorial led in a few weeks to the organization of a society and to a petition for a charter from Sigma Xi. Notice of granting the charter is contained in a letter from President C. C. Brown, dated March 8; this charter was received and formally accepted at a meeting of the charter members held in New Haven, March 16, when temporary officers were elected. On March 29 Professor Frederick Bedell of Cornell formally inaugurated the Yale chapter, and soon after wrote to President Brown: "I was much pleased with the start the Society has at New Haven, and it is more than likely that our youngest chapter will soon be one of the strongest."

Thus it was that eight years after the importance of the move had impressed itself on the original group of Sigma Xi members a chapter came into existence at Yale. It was, however, far stronger in having originated in response to an internal demand for such an organization rather than as a result of any outside influence such as that recorded in the early minutes of the Alpha Chapter of Sigma Xi. Yale was committed to Sigma Xi on her own initiative.

The establishment of the Yale chapter was a most significant factor in the history of Sigma Xi. Not only that it added to the chapter roll a new name, but also and even more, that the new chapter was located in one of the oldest, strongest, and most influential of American institutions. Moreover, its faculty was rich in men justly ranked among leaders in scientific research; its scientific laboratories, museums, and publications were widely and favorably known, and its entrance into Sigma Xi laid at once an additional and evident emphasis on original research. The Cornell chapter had now a worthy rival in the contest for scientific leadership. Moreover the Yale chapter had its own opinions and did not hesitate to express them. For instance, one of its officers writes within two weeks in regard to a chapter letter: "We will adopt Y and if anyone wishes to give it a Greek significance he can call it Upsilon; but we shall call the chapter the Yale chapter." That same spring also it prepared certain amendments to the Constitution which were presented to the convention at Springfield in August. At that convention finally the Yale representative on the committee on extension, Professor Williams, though newly appointed, formulated and presented the report of that committee, which has since been printed with the Constitution, and has been powerfully influential in shaping the development of Sigma Xi.

Yale took at once, and has held ever since, a prominent position in directing the policy of extension towards which Sigma Xi was then looking. But this influence was exerted with constant consideration for the attitude of the parent chapter at Cornell, which up to that time had borne the brunt of the fight. This cordial relation is shown clearly in the position of Yale with reference to the next great question which came up in the Society. Kansas had been granted a charter in 1889 and others of the vigorous and rapidly growing state universities of the central west had been quick to ask the value of the organization, and finding its ideals peculiarly well adapted to the demands of their environment were petitioning for charters. Yale men, like Eddy at Minnesota, were leaders in these movements and Yale influence had always been prominent in western colleges. No doubt then the Yale chapter was inclined to favor such applications, and yet one of the Yale leaders writes to one of the Cornell officers in 1896 as follows: "At Buffalo * * western men were strongly of the opinion that * * and several others of the state universities should have charters. * * Now it seems to me that it rests much with the Cornell chapter as to whether we shall adopt one or the other policy. * * If you at Ithaca after hearing [the arguments] and considering what the effect upon the Society will likely be, if you think the time is ripe for so extending the Society and practically yourselves losing control of its policy and guidance, which you have always held from the beginning, I am ready to accept the decision and take part in the advance."

Those who had opposed expansion were now lining up in its favor. After the Yale chapter was organized, one prominent member of Sigma Xi who had voted against other petitions wrote in 1895, "I am inclined now to the opinion that some of the better western institutions should be recognized." This was a year before the inquiry quoted above

was made concerning the opinion of the Cornell chapter. What views the Alpha chapter held may be inferred from the fact that its officers appear as leaders in urging the granting of charters given in 1896 to Minnesota, in 1897 to Nebraska, and in 1898 to Ohio. Meantime the convention of 1897 at Toronto had spoken strongly in favor of extension which had been made the theme of the presidential address of that convention, delivered by Professor Williams. The current was setting strongly towards the west, and he himself favored the general policy of extension; nevertheless he wrote in that year to Cornell voicing once more the same consideration for the parent chapter:

"We are not yet fully out of the woods; there are still important problems to come up regarding the policy of the Society and I had hoped we might keep the active nucleus at Cornell. The advantage of having several members in one place is that every matter may be discussed thoroughly." But Cornell was actively committed to the policy of extending the influence of the Society as widely as possible, and no doubt also felt convinced that the welfare of the organization might safely be entrusted to the hands of the state universities with which she was in closest touch and with whose ideals she was thoroughly familiar.

The western movement halted for the moment, as Pennsylvania in 1899 and Brown in 1900 were the next to be granted charters. The same year also saw Iowa admitted; so that the close of the fifteenth year of Sigma Xi history found the organization with eleven chapters, as against only five chapters at the end of the tenth year. The growth of the Society was even more vigorous in the next succeeding period. After Stanford in 1901, California and Columbia followed in 1902; Chicago, Michigan, and Illinois were admitted in 1903; Case and Indiana in 1904, and Missouri and Colorado in 1905. Twenty years had resulted in the organization of twenty-one chapters. Northwestern and Syracuse were added in 1906. Wisconsin and Washington State in 1907, Worcester in 1908, and Purdue in 1909; finally Washington University in 1910 made the total of twenty-eight active chapters in the first quarter century of Sigma Xi history.

Of the institutions represented on the chapter roll thirteen are state universities and one, Purdue, a state technical school, while two others, Cornell and Pennsylvania, have somewhat analogous positions in eastern states. The latter are included usually, however, in the endowed institutions of university rank, in which Sigma Xi has eleven chapters. In addition there are three endowed technical schools having Sigma Xi chapters.

Geographically considered, the Society is represented by chapters in seven endowed universities and two endowed technical schools in the eastern states, by a chapter in every north central state university and in two endowed universities and two technical schools in the north central region, while two state universities and one endowed institution on the Pacific coast are represented. There are in all nine chapters in the east and nineteen west of the Alleghenies, of which three are on the shores of the Pacific. Thus far no chapters have been organized in southern institutions, but the increasing interest in re-

search throughout the south is indicative of the approaching participation of that region also in the movement.

Within the past two or three years some conservatism has been manifested in granting charters to new institutions, since it has been generally felt that the precise method of determining qualifications for election to membership needed recasting in order that different chapters might secure reasonably uniform results. In case a basis can be determined which will be as readily applied in an institution with a limited number of scientific workers and only occasional students who are qualified for membership, as in a large university or technical school affording opportunities for selection among the many students of each annual group, then sentiment seems to favor the organization of chapters in a much larger number of institutions than are yet represented. The problem is now under discussion.

The Society is so young that only one chapter has had occasion to mark the passing of years in any formal manner. On July 2, 1906, the Alpha Chapter celebrated the twentieth anniversary of the founding of that chapter and of the Society. The occasion coincided with the summer meeting of the American Association for the Advancement of Science at Ithaca. The other chapters sent official greetings and many of them appointed official delegates to convey their congratulations to the parent chapter on this occasion. The program included a public address by Dr. J. C. Branner of Stanford University, on the California Earthquake, and a dinner tendered visiting members and delegates by the Cornell Chapter.

PART II

INTERNAL ORGANIZATION

The original constitution, adopted by the founders of the Society and carefully observed by the parent organization, the Cornell chapter, provided that "a convention of the Society consisting of delegates from each chapter shall be held each year, or oftener, if appointed by the President." It also made provision for officers of the Society to be elected at the annual convention, as well as for chapter officers chosen in accordance with chapter by-laws, and stated specifically the powers and duties of these officers in a section apart from that dealing with chapter officers. In a series of sections, this document prescribed with some definiteness the manner of selecting delegates, the proper form for credentials and also an extended and definite order of business for the convention. Furthermore, one article of this original constitution was devoted to providing the means by which new chapters might be established. Thus, although it was in appearance the organic law of a single chapter only and is quoted as such in the minutes of the first convention,* this document was in fact far broader and more

*V. A. Moore, in his president's address to the Cornell Chapter, in June, 1903, expresses the same idea, when he says of the first convention, "The essential work of this meeting was the adoption of the constitution previously prepared by the Alpha Chapter."

significant than the constitution of any one chapter could have been. All of the facts show unmistakably that the founders of Sigma Xi had in mind a comprehensive general organization and endeavored to meet the needs of such a body.

In spite of these provisions for general meetings, the Society existed for several years merely as a group of separate chapters without rules for action or formal methods of procedure actually used for the general society. The need of a closer organization soon became apparent and at the nineteenth meeting of the Cornell Chapter, March 3, 1890, it is recorded that the matter of calling a convention was referred to the officers of the chapter with power to act. At the next meeting, April 20, the minutes record that favorable replies were reported from the chapters at Union and the Rensselaer Polytechnic, so that the committee was instructed to call a convention at Ithaca on May 16 and 17, 1890, and delegates were elected to represent the chapter. Owing to the impossibility of securing a quorum,† since no replies could be obtained from the chapters at Rutgers and Stevens Institute, it was subsequently decided to hold a conference of the three existing chapters.

The minutes make no mention of the outcome of these plans and the next formal reference to the problems of a general organization for the Society occurs a year and a half later. On November 14, 1892, action was taken by the Cornell Chapter looking towards revoking the charters of the two defunct chapters; and after the chapter roll had been corrected a formal call for a convention in May, 1893, was sent out in the name of the Cornell Chapter. The officers for the first convention were those of the parent chapter, in part at least, as shown in the written record of that meeting; but no records exist in the minutes of the Cornell Chapter, or in the Record Book of the general Society, to show except by inference the correction of the chapter roll, the sending of a formal call for the convention, or the organization of the convention. Undoubtedly the details were arranged by the Cornell Chapter, for it printed and distributed the program, a copy of which is reproduced on the opposite page. It also entertained the delegates at its thirty-third meeting, according to the chapter's records which are identical with the part of the Convention records. On this occasion Professor E. L. Nichols gave a public lecture after which the chapter held a reception in honor of the delegates to the Convention. Here terminates the record in the chapter minutes, but the delegates must have been inspired with enthusiastic devotion to the work of the occasion, for they attacked the problem of discussing

†This phrase, taken from the old records, shows distinctly that the Society at that time considered itself obligated by the provisions of the original constitution which specified for a quorum delegates from three-fourths of the active chapters. It also indicates marked consideration for the two chapters, which, so far as can be ascertained, never held but a single meeting each, and might have been eliminated from consideration under the terms of the constitution without any formal action. At the same time, since there were only three chapters in existence, it is apparent that a legal majority of the membership would have required the presence of delegates from every chapter at all times before the granting of the charter to Kansas on December 4, 1889.

and modifying, item by item, the old constitution presented by the Cornell Chapter, and succeeded in working into shape a considerable portion of the new law before adjournment was reached.

While the action noted in 1890 was the only attempt on record prior to the first formal convention of 1893 to assemble the chapters for general action, unwritten history tells of several other futile efforts to secure such a meeting, all of which resulted inevitably in "no quorum present," since two of the five original chapters had an existence on paper only. Once that the difficulties were solved, a convention actually held and a revised constitution adopted, the machinery of the general Society has operated regularly and with very little complication. A series of eight biennial conventions was held from 1893 to 1906, then a special convention in 1907, followed by annual conventions from 1908 to date. After the first convention, which was independent of any other meeting, all these gatherings have been held in conjunction with the annual meeting of the American Association for the Advancement of Science. The naturalness of this affiliation was so apparent that when the Association changed its customs and replaced the midsummer meeting by one in the holiday period, Sigma Xi followed the change and since then has met regularly in Convocation Week, and at the place chosen for the meeting of the Association. These gatherings have been unusually successful in bringing together scientific workers whose technical interests are so varied that they could hardly hope to come in contact in any other way. The Sigma Xi dinner has been a regular feature of the gathering ever since it was so successfully inaugurated at St. Louis. The address delivered then by David Starr Jordan is one of the most accessible and best known of all articles on the aims and ideals of Sigma Xi. Subsequent dinners have assumed a less formal character, but, in spite of the pressure of other engagements during the limited period actually available in Convocation Week, the social part of the Sigma Xi Convention has been greeted each year with increasing interest and pleasure. The younger men welcome gladly this opportunity to meet on an informal, fraternal basis those who have won a place in science, and the varied representation on this occasion from year to year is the means of developing a growing interest in the achievements of the Society among many who would otherwise know little or nothing regarding its work and the results thereof.

While the social side of recent conventions has been successfully developed, some criticism has been passed on the unsatisfactory character of the business meetings. The great variety of scientific programs during Convocation Week and the multiplicity of demands from special organizations render it impossible to select a time for the business session which does not conflict with numerous other attractions and duties. Delegates entrusted by their respective chapters with important responsibilities for Sigma Xi are kept away from its meeting despite their best endeavors, and after a prolonged discussion a call of the house has more than once disclosed no quorum present. The resulting confusion, loss of time and effort, and uncertainty as to the outcome, have given rise to a demand, apparently growing in strength, that the business meetings of Sigma Xi should be held distinct from those of

other organizations. In this event they might be less frequent and yet provide adequately for the business needs of the organization. The Minnesota Chapter has this year presented amendments to the Constitution of the Society calculated to introduce separate conventions and to make them biennial rather than annual. While this move is clearly justified by the experience of recent years, may it not be equally wise to retain the annual social gathering in Convocation Week which has done such good service in bringing members in touch with each other? The wide geographic and scientific range of chapters and membership demands centripetal influences strong enough to hold together the separate elements. The cohesive power of personal contact is too valuable to be lightly dispensed with. Its value to the Society is great and its inspiration to the individual member still greater.

GENERAL CONVENTIONS

The first convention of the Sigma Xi Society was held at Cornell University, being called to order on May 17, 1893, by the Vice-President of the Cornell Chapter, L. M. Dennis, who presided during the first day; whereas the President, E. L. Nichols, presided over the sessions of May 18. The group of delegates was not large; three chapters, viz., Alpha (Cornell), Theta (Union), and Iota (Kansas), were represented by delegates as given in the appended list.* The Zeta (Rensselaer Polytechnic Institute) Chapter was not represented in person, although the minutes indicate that it presented certain amendments to the proposed constitution. The records, still existing in the Record Book of the Society, are signed by J. H. Tanner, Secretary. The Convention held four sessions during two days and after receiving reports from various chapters proceeded to discuss and adopt with some minor amendments "the Constitution prepared† by the Cornell Chapter." The new Constitution was ordered printed, and the Treasurer

†As already noted, this was in reality the constitution prepared by the founders of Sigma Xi for the entire society. It had been in keeping of the parent chapter, and had been carefully observed in all matters that pertained both to general interests, and to chapter responsibilities. So far as the convention records show, it came up in its original unaltered form, and the action of the delegates was really a revision of the organic law of the Sigma Xi rather than the adoption of a constitution, even though the latter construction is placed on it in the written records.

was authorized to procure an official seal and monogram for the Society. After much discussion regarding the policy of the organization a standing committee on new chapters was appointed; this was subsequently known as the Committee on Extension. The Convention voted down an amendment declaring that women are ineligible to membership. At the close Professor C. C. Brown (Union) was elected President for two years, Professor James McMahan (Cornell) Corresponding Secretary for four years and Professor J. H. Comstock (Cornell) Treasurer for two years. The record contains no mention of the selection of the other officers, vice-president and recording secretary, which are enumerated in the Constitution.

The second biennial convention of the Society of the Sigma Xi was held at Springfield, Massachusetts, August 28 and 29, 1895, under the presidency of Professor C. C. Brown (Union). Its membership is shown in the appended list.* The President, in his report, gave a detailed statement of the founding of the Yale Chapter in March, 1895, and of correspondence regarding new chapters. He also reported his appointment of Professor H. S. Williams as the Yale representative on the Committee on Extension, which was created by the last Convention. In the absence of the chairman of that committee, Professor Williams stated the views of the committee regarding the policy of the Society in founding new chapters. These remarks and the resolutions subsequently adopted by this convention were printed and distributed for the information of the Council and chapters. Both the remarks and the resolutions have in later years been incorporated into the Constitution, and are printed with it regularly as Appendix I (see page 52). They have thus come to be regarded as a distinct part of the organic law governing the organization.

The importance of this action can hardly be overestimated. For the success of the movement to extend the influence of Sigma Xi, which was just taking shape, it was essential to have a policy as firm as it was broad, both definite and unassailable. To leave the decision in granting new charters to the chance of circumstances was to open the door to all sorts of variation and to individual interpretation of unexpressed ideals and undefined standards, even where personal bias was rigidly excluded. Just at this moment Sigma Xi found its interpreter in the person of one of the founders, whose individual achieve-

The Committee on Extension had been increased by the addition of Henry Shaler Williams (Yale), appointed April 3, 1895, on the organization of the Yale Chapter; otherwise its membership remained as constituted at the close of the first convention and recorded on the previous page.

ment in the field of research was of the highest type. His expression of the aims of the Society and his statement of the standards that should be observed in the admission of new chapters commanded immediate support, and have been unreservedly accepted and recognized by Sigma Xi since then.

Certain other amendments to the Constitution were adopted; these concerned the method of procedure in applying for and in establishing a new chapter, including the form of the charter.

The most important change in the organization of the Society was unquestionably the establishment of the Council. By constitutional amendment the Committee on Extension was given a permanent existence, under the name of the Council, and its powers were made definite. The officers of the Society became *ex-officio* members, and provision was made for an additional representative elected by each chapter; the elective members were to hold office for five years, and one of them was to be named as chairman by the president. The chief duty of the Council was to advise on the granting of charters; no charter was to be granted without the consent of three-fourths of the Council, as well as of three-fourths of the chapters. (See Art. II of the Constitution as amended in 1895.)

The Corresponding Secretary was instructed to print the amended constitution, together with a revised list of members, and to have a suitable letter-head devised and engraved. After tendering a hearty vote of thanks to the retiring President for his untiring efforts in behalf of the Society, the Convention adjourned *sine die*.

The third biennial Convention of the Society was held at the University of Toronto, August 20, 1897. The most important question handled by the meeting was the problem of extension. President Williams, in his address, dwelt upon the ideals of the Society and the history of the Yale chapter, and expressed the opinion that Sigma Xi, if rightly guided, would take a place of leadership in the movement under way to place science on an equal footing with literature, as a factor in the highest liberal education (See Constitution, Appendix II, page 53). The Constitution was amended so as to abolish the veto power of three negative ballots in the election of new members, since this power had been abused by irresponsible persons. Reports from the various chapters were given by delegates present. It was voted that the ordinary geographic name of the chapter might be used when desired instead of the Greek letter (See Constitution, Appendix III, page 54). The Council was ordered to prepare in printed form a summary of the remarks on extension for the information of the various chapters. The Secretary was requested to distribute type-written copies of the minutes to the different chapters. These two actions were subsequently combined in the form of a pamphlet including the full proceedings of the Convention. Since then the convention proceedings have all been issued in printed form. It was unanimously voted that the selection of the time and place for the meeting of the next Convention be referred to the five officers with power, but that "this Convention is of the opinion that it is desirable that the Convention should be held at the same time and place with the meeting of the American Association for the Advancement of Science."

The fourth biennial Convention was held at Columbus, Ohio, on August 22 and 23, 1899. Various amendments to the Constitution were made with a view to providing for the selection of new members more definitely in accordance with the general purpose of the Society, and chapters were recommended to employ the method of selection by means of a Board of Electors. The Convention fixed upon Tuesday evening of Convocation Week as the regular meeting time for future Conventions, and the place of the meeting of the American Association for the Advancement of Science as its meeting place. It also decided to plan for a reunion of the Society at the next meeting of the Association, thus bridging over the interval between the biennial conventions. Lists of officers and statistics from chapters, which were read before the meeting, were for the first time included in the published record of the Convention.

The fifth biennial Convention was held in Denver, Colorado, on August 28, 1901, Vice-president Samuel W. Williston presiding in the enforced absence of the President. The problem of choosing members was a prominent subject in the discussion, and numerous suggestions on this question are contained in the reports of chapters, and in the discussions of the Convention. The question of modifying the form of the badge was broached, and after full discussion the Council was requested to invite suggestions from chapters and individual members, and to report to the next Convention.

The Convention recorded a vote of thanks to the retiring President, Professor H. S. Williams, "in recognition of fifteen years of wise counsel and guidance since the Society's birth and six years of devoted and exemplary administration of the Presidential office." The retiring address of the President was made a part of the records of the Convention. The statistics regarding chapters added to the convention records are in this case accompanied by lists of scientific papers read at recent chapter meetings.

The sixth Convention was held December 30, 1902, at Washington, D. C., the change in time being associated with a similar change in the program of the American Association for the Advancement of Science. Much attention was again devoted to the question of the election of members and the groups of students eligible to membership, and these points were emphasized in the address of the President, Professor S. W. Williston, which was printed in full in the Convention proceedings. A part of this address has since then been printed as Appendix VI of the Constitution (see page 54). The meeting provided for a social session as well as a business meeting at the next Convention.

The seventh Convention was held December 29, 1904, at the University of Pennsylvania, President S. W. Williston in the chair. The President, in his address, emphasized the responsibilities which were laid upon the organization and also the need of more frequent and perfect communication between chapters and members. The report of the committee recommending a change in the form of the badge was favorably acted upon and steps taken to modify the method of admitting new chapters, and to make conventions of the Society annual.

The eighth biennial Convention was held at Columbia University, New York City, December 31, 1906, under the presidency of Professor E. L. Nichols. The preparation of a membership record for the entire Society was broached and an appropriation made to collect data therefor. The question of the badge was discussed at length, and the action of the Council in the selecting of a uniform official badge for future members was endorsed.

A special Convention of the Society was held at the University of Chicago, January 3, 1908, under the presidency of Professor E. L. Nichols. The Convention adopted constitutional amendments specifying the form and use of the badge, and the method of presenting a petition for the establishment of a new chapter. A report by the Cornell Chapter, which is printed in full in the Convention Proceedings, submitted for discussion the question of junior or associate members. The President's address and the report of the Corresponding Secretary are printed in the Proceedings, but statistical data regarding chapters are omitted.

The tenth Convention of the Society was held at Johns Hopkins University, January 2, 1909, President E. L. Nichols in the chair. The President in his report discussed the difficulty of arranging a time for the Convention so as to avoid conflicts with other organizations when the meeting was held in connection with Convocation Week. He reported on the progress of the Society and the establishment of new chapters. He spoke also of the desirability of forming chapters in centers of scientific activity, such as Washington, D. C., where no institution of learning offers conditions conforming with those laid down by the Society for the organization of an active chapter. The Convention authorized the preparation of a Sigma Xi catalog and the canvas of the chapters to determine the advisability of publishing the same. Amendments to the Constitution were formulated covering the voting of new chapters.

The eleventh Convention was held at the Massachusetts Institute of Technology, December 29, 1909. The address of the President, Professor F. O. Marvin, called attention prominently to the fact that the general scheme of conducting the business of the organization was not adequate for the Society with its large and widely scattered present membership and recommended more centralization of authority. Recommendations for change in the Constitution, made by various chapters in the form of a series of proposed amendments, which were printed as appendices to the Proceedings of the Convention, were referred to a Committee of Seven, with instructions to print and distribute in advance the results of their deliberations in order that action might be taken at the next Convention.

The twelfth Convention of the Society was held at the University of Minnesota, on December 30, 1910. The address of the President, Dean F. O. Marvin, discussed primarily the tremendous increase in the membership of the Society and in the geographic range of its chapters, and emphasized the seriousness of the problems which had arisen in connection with this growth. The President recommended that greater authority should be conferred upon the Council, and that conventions

should be held only periodically instead of annually and should be distinct from the meetings of other organizations. The report of the Committee of Seven was, after discussion, referred to the Chapters for further suggestion and to the Committee for revision preparatory to final consideration at the next Convention.

The Corresponding Secretary was authorized to undertake the preparation and publication, at the expense of the Society, of a Quarter Century Record under the direction of the Executive Committee. Amendments to the Constitution regarding the granting of charters were acted upon. The constitutional amendments pending were printed as an appendix to the Proceedings of the Convention.

The thirteenth Convention was held at Washington, D. C., December 28, 1911. The President, Dean Henry T. Eddy, in his address dealt primarily with the position taken with reference to the granting of new charters and the principles which had actuated the Council in its attitude towards recent petitions for charters. The President recommended that the Society hold its Conventions apart from the meetings of other organizations, that the necessary expenses of one delegate from each chapter be paid from the general treasury of the Society, and that the Council be granted much greater powers in the transaction of business. The report of the Corresponding Secretary on the Quarter Century Record and History was approved and the contract for printing the same awarded. The report of the Committee of Seven was carefully discussed and the Convention voted not to add new classes of active members, but agreed to the constitutional amendments providing for non-resident membership and for greater powers of the Council. An important step was taken when the Convention instructed the Council in considering the admission of new chapters to insure that at any petitioning institution there shall be a satisfactory and continuous output of research work. This provision is now printed with the Constitution. (App. VII, page 55.)

THE SELECTION OF MEMBERS

The methods followed in selecting members have been greatly modified in the course of the twenty-five years which have elapsed since the first candidates were chosen. Yet the change is hardly more than a natural modification due to the growth of the Society and the increase in the number of students pursuing scientific branches and hence subject to consideration. In the large universities of the present whose single department often exceeds in enrollment the entire student population of the institutions where Sigma Xi began its history, the individual consideration given in earlier years is impossible. The earlier plan did more than merely select those whose work justified the honor of election to Sigma Xi; it served to develop and clarify in the minds of the members themselves the precise ideals which Sigma Xi was endeavoring to inculcate. This plan is described as follows, by one of the early Cornell members.

"At first it was deemed necessary to discuss every candidate in the whole society. The members who recommended one must be there to give his record and make personal defense of his eligibility, and three

black-balls were sufficient to exclude him. But as the Society grew larger, this method of selection proved unfair and unsatisfactory, especially since the power of the three black-balls came near ruining the Society. There seemed to be prejudice and conspiracy year after year to keep out men from certain departments. This finally brought about a revolt of the stronger members, and the perfectly fair method of election by committee, employed since that time, has proved most satisfactory."

The difficulties outlined have been repeated many times in other chapters. In general their solution has been reached in much the same way, so this method of election is now specified in the Constitution and thus imposed upon the various chapters. While the method of electing members has not been subjected to criticism in recent years, there has been widespread discussion concerning the basis for reaching a decision in regard to the qualifications of the different types of members specified in the Constitution.

Regarding faculty elections there is little chance for any pronounced differences in opinion. The publication of research work is a specific test which can be applied as concrete evidence to establish the "noteworthy achievement as an original investigator" which the Constitution exacts of any faculty member in order to be eligible to active membership. Concerning the next group also, the specifications are equally definite since the "actual work" demanded by the Constitution to make resident graduates eligible can readily be demonstrated to a Board of Electors. But when one comes to consider undergraduates there is great diversity of opinion as to the meaning of the phrase "who has given promise of marked ability," by which the Constitution establishes the standard for elections from this group.

The present vigorous discussion of the question is by no means new. The same difficulties existed in the early days of the Society, and are vividly set forth in a letter recounting the experiences of that period:

"Those of us who remember the beginnings will recall that for several years candidates were discussed with a great deal of care by the whole chapter and often long meetings extending into the midnight hours and sometimes postponed second meetings were necessary to settle the question of proper candidates. In these meetings we conferred together and by working on concrete cases developed our ideas of the signs of real ability by which the proper undergraduate could be recognized. We fought over the 'marking system' and came to the conclusion that the marks given students for recitations and examinations were not (as then applied) a satisfactory criterion for judging the 'promise' along the lines contemplated by the Society. We learned that personal touch in the classroom and laboratory were needed to supplement the marks and that in our own classes were men who attained high marks who did not show as good promise as others lower in average standing, as measured by examination papers.

"We insisted that the marks were founded on ideals of scholarship, which as to mental ability signified little more than power of verbal memory and a close attention to language and words, and did not signify (not much at least) the ability of the student to compre-

hend what he had learned, nor his capacity to make original investigation and judgment of the truth, and could not be relied on as evidence of promise of ability to discover truth or to conduct original research successfully, which is demanded of a scientific scholar. The Yale men as the discussion progressed, caught the idea, but for some time the Society was in bad favor for presuming to question the 'marking system.' As the fundamental ideas of the Society came to be better understood, a strong chapter was developed at Yale.

"Later discussion has arisen as to the meaning of 'promise' in the Constitution. On the one side it has been urged that men should be elected only on evidence of some accomplished work, and the result of carrying out that idea would be to exclude undergraduates from election. In reply to this it has been urged that the Society, to be of most value in universities, must select the men in their formative period, and this election could be taken by them to mean that their elders recommended them to try their strength in graduate work; also that in case the Society waited for definite completed work, it would come into competition with the scientific societies in various branches of science whose membership is distinctly based upon acquirement of some real results by the path of original research.

"A move in the opposite direction has found many advocates; they have urged that in some branches of science and in technical subjects, when there are larger classes, it is very difficult to discover in the undergraduate sufficient expression of 'ability in research' to judge between one and another, so that in selecting the Society will be forced to rest purely upon marks, while in other subjects with fewer students or in fields of work where the student meets in closer relationship with his instructors in the laboratory, differences in this ability could be detected. It is urged that to apply the rules of the Society too rigidly will unduly exclude good men from the technical group."

NAME AND EMBLEMS

The key of Sigma Xi was devised by the first members, without attributing any special significance to the letters. In the first Constitution printed in 1888 the title of the Society is given in Art. I, Sec. 1, as follows:

The name of this organization shall be known under the Greek designation of the Sigma Xi Society.

Several years later Professor Williams hunted out words* to form an appropriate Greek motto having the same initials. The original form of the motto was *Σπουδῶν Ζυγόνες* with the significance "Partners in Investigation." Both this form of the motto and this interpretation appear written in an old record under the date of May 18, 1891.

In the Constitution as revised in 1892, Art. I, Sec. 1 appears thus:

The name of this organization shall be the Society of the Sigma Xi; its motto *Σπουδῶν Ζυγόνες* "Companions in Zealous Research."

The latter form of the Greek motto has been generally followed in publications of later date. It appears that this form is supported by classical authority as being the best Attic Greek.

At the Cornell Convention the Treasurer, Professor Comstock, was authorized to procure a seal and monogram, and two years later at Springfield, Professors Osborne and McMahon were instructed to devise a suitable letter head. One of the original members writes that the seal of the Society was designed by Professor Osborne, who also selected the colors that were adopted by the organization.

The original Constitution (1887) specified the conditions under which new chapters might be granted, but did not designate any chapter by name or letter, although it mentions the use of the chapter letter on the insignia of the Society. The later edition of the first Constitution (1888) opens with a list of the five chapters designated by Greek chapter letters. No reference is made to this in the text, but in the headings which introduce the list of members the names of these chapter letters appear again. No evidence has been found to show when the letters were granted or by whom they were given to these and to later chapters. Curiously, the letters used do not follow the order of the Greek alphabet or appear to be in any other way related to the names of the chapters employing them.

A clipping from an old Cornell college paper (of 1887 ?), in speaking of the early days of the Society and its rapid progress, says: "The society is in a prosperous condition and promises considerable benefit for its members. Already chapters have been established at Stevens Institute of Technology, Harvard, Rutgers, Massachusetts Institute of Technology, Rensselaer Polytechnic Institute, and Union College, and organizations of chapters are under way at several other colleges."

When the names in the list cited are compared in the order given with the letters of the Greek alphabet, provided Alpha is kept for the Cornell Chapter, each known chapter mentioned, either defunct or existing, receives its proper chapter letter with the exception of Union. Is it possible that Harvard was to have been the missing Gamma Chapter, Massachusetts Institute the missing Epsilon, and some "other college" the Eta Chapter? It is not improbable that in some details the plans of the founders were not realized. The missing chapter letters would certainly suggest that such was the case, whether or not the list cited indicates correctly the institutions at which chapters were to have been formed.

So far as old correspondence and official documents furnish any evidence, the letters which have been used in various places to refer to certain chapters are the following: Alpha, Cornell; Beta, Stevens Institute; Delta, Rutgers; Zeta, Rensselaer Polytechnic Institute; Theta, Union; Iota, Kansas; Kappa, Columbia; Mu, Minnesota; Pi, Pennsylvania; Upsilon, Yale; Omega, Ohio.

This irregularity is explained in part by unwritten records from the recollections of an early officer that "when Yale was founded its letter should have been Kappa, but the chapter objected to any letter but Y, saying that anyone who liked could call it Upsilon. The next chapter (Minnesota) followed the example of Yale and adopted the letter M; then came Nebraska with N, Ohio with O, Pennsylvania with P. Iowa wanted to take I, but could not on account of Kansas having Iota. California, Columbia, and Chicago could not all take C. This put an

end to the 'initial' business; and the convention of 1897 had in any case authorized the use of geographical names instead of Greek letters." When and why Minnesota's M became Mu, Pennsylvania's P became Pi, and Ohio's O became Omega research has not yet disclosed. The latter is particularly hard to decide since the files of the Society contain early correspondence from the Ohio Chapter asking to be assigned Omikron as a chapter letter. And the request was approved!

Within recent years several attempts have been made to establish again a list of chapter letters and to extend them to those chapters which have never been granted such designations. But no official action has been taken by any Convention, and no method is provided as yet by which any chapter may secure a chapter letter for its proper use.

The use of a designative initial would be both appropriate and convenient, but while the present list of chapters would furnish only one claimant each for B, K, O, R, U, and Y, there are two contestants each for N, P, and S, three each for I and M, four for W and six for C. An arbitrary designation would be difficult to introduce since the alphabetic sequence was abandoned so long ago and certain letters have been pre-empted. Meanwhile the newly organized chapters remain without any chapter letter although several have expressed repeatedly a desire for such a designation.

It is of course evident that the limits of either the Greek or the Roman alphabet have been reached and that if the Society is to have that development which its principles deserve, a double or even a triple letter combination would soon become necessary. The difficulties of remembering such a designation and applying it correctly are great within the organization and insurmountable outside of its circle. On the other hand a geographical or institutional designation is easily recognized and used by all; it does add an important fact for both writer and reader, and there is little ground for confusion. As one old member writes: "It may be heterodox but I like Cornell Chapter better than Alpha Chapter, although no one can fail to recognize the fitness of the latter name. Kansas Chapter has a meaning to me that Iota does not unless I consult the list which even we old members do not always have at hand; and to me, at least, Columbia sounds more dignified than Kappa. Why just think what Sigma Xi would have lost if the Yale men had been willing to submerge under some Greek initial the name of that grand institution and if we had not enjoyed the benefit of its standing in science."

PART III

THE WORK OF SIGMA XI

Of the further progress of the Society little need be said in detail. What one prominent Cornell member writes of that chapter has proved true of others generally:

"The Society had many ups and downs in its early years, but on the whole had a healthy growth, and has undoubtedly had a great and salutary effect at Cornell, for it was the plan of the founders of Sigma Xi

not merely that high standing should win election, but that powers of investigation should count for much."

The record of individual chapters is given in the historical sketches written by the chapter secretaries. The same difficulties have repeated themselves again and again in the different chapters. On the whole the new chapters have profited both by the experience of the older ones and by the increasing prestige which has accompanied the growth of the organization.

Sigma Xi has certainly done good service for American universities in emphasizing the educational and cultural value of scientific training. By stamping as the primary factor in scientific pursuits the power to investigate, to advance the limits of knowledge, it has laid the emphasis on the general good and has freed itself from the self-centered tendency of some educational movements. Locally it has often taken the lead in the discussion of educational values, and while never failing to recognize the worth of research in pure science both to the individual and to the world, it has put on an equal basis the pursuit of applied science which in the hands of modern civilized nations has prolonged human life and made it in a thousand ways infinitely better worth living. The emphasis thus laid upon service may justly be regarded as a worthy contribution to the advancement of the nation.

The Society has contributed to the encouragement of research in the first instance by adopting the research standard as its basis in the election of members. The selection is limited in the case of faculty members and of graduate students to those who have demonstrated their ability in investigation, and even among the undergraduates the clearly evidenced promise of such ability is the essential condition for nomination and election. Everyone must recognize some imperfections in the system and yet the errors in individual cases disappear when one examines the total result. There is abundant testimony that the ideals which Sigma Xi has upheld in university and college circles have stimulated many to enter upon or to train for research work in order to prove themselves worthy of membership. On the other hand membership has brought to others in equal numbers a realization of the responsibility laid upon them to uphold the high standards of Sigma Xi.

The various chapters have sought further to emphasize investigation by paying due honor to the investigator. From the outset chapters have held private meetings at stated intervals at which the programs have been devoted primarily to the presentation of the results of investigations both on the part of members and of others. Such meetings have been instrumental in putting members broadly in touch with the progress of science and in counteracting the narrow specialism so readily produced by intensive research in any one field. They have suggested new relations between different lines of work and have been a distinct stimulus to further research on the part of both speakers and hearers. The development of the social and fraternal spirit among investigators has been a useful and otherwise undischarged function in many communities.

In many of the older institutions of learning in this country it has been the custom for nearly half a century to include among the

events of commencement week a literary oration delivered by some distinguished man appearing under the auspices of Phi Beta Kappa. Minnesota was apparently the first to appreciate that the new learning deserved equally dignified presentation before the university public, and on June 3, 1896, Professor Henry T. Eddy, later President of Sigma Xi (1909-1911), delivered the first Sigma Xi Commencement Oration. The independent relation existed only a few years and was supplanted by a new arrangement. Sigma Xi undertook to alternate with Phi Beta Kappa in securing some distinguished speaker to address the university community during commencement week under the joint auspices of the two societies. The first speaker under this new plan was Professor T. C. Mendenhall, who delivered the annual address on May 31, 1899. A year later the Kansas chapter inaugurated the same plan at the University of Kansas. Since then Pennsylvania, Illinois, and perhaps other chapters, have made similar arrangements. For some years the Nebraska chapter provided for the midwinter commencement of the University an oration by some scientific man of national reputation in the same fashion as Phi Beta Kappa cared for the summer commencement by introducing a literary oration.

In connection with the regular series of private meetings some chapters have also provided open meetings with a more formal program to which the general public has been invited. The object of bringing the results of scientific investigations effectively before the community has been so well attained by such public addresses that certain chapters have endeavored to emphasize still more strongly the purpose of the Society by inviting speakers from a distance and giving to the occasion a more conspicuous character. In order to secure the advantages of united action the four chapters at Missouri, Kansas, Iowa, and Nebraska organized a circuit and provided for a group of three or four addresses to be given at each university in successive periods. The month of February was selected as the most favorable season. The first speaker in 1907 was Doctor Charles S. Minot of Harvard; in 1908, Professor R. H. Chittenden of Yale delivered the addresses; in 1909 Professor A. G. Webster of Clark, and in 1910 Professor Percival Lowell of Harvard. The plan proved so successful that other chapters desired to be included in the circuit and ultimately several such circuits were organized in the mid-west. While every university community is favored with many addresses by men of prominence and ability, these Sigma Xi lectures have met with distinct favor and the fundamental reason lies in the presentation in a form intelligible to an educated audience of the results of scientific research by men who speak with authority and are recognized as themselves investigators of first rank.

At least one chapter, Ohio, has been the recipient of funds from outside sources for the maintenance of an independent series of such lectures by scientific investigators. The results of the gift are recorded in the history of the Ohio chapter.

Although such influences have been exercised in the main in a purely local fashion and reach the great body of the people through a multitude of minute channels so that they are difficult to detect and still more difficult to measure, yet when occasion offers the training for service

and the impulse to it have manifested themselves in a more conspicuous fashion. The most striking instance of this is undoubtedly the relation of the California chapter to the invasion of bubonic plague, related so briefly and unostentatiously in the history of that chapter. It would be impossible to estimate in any adequate fashion the commercial and humanitarian results following directly from this action of the California chapter; and the published report of this work has been the means of helping scientific workers and health officials in widely scattered communities both in the United States and beyond its limits. In fact this publication has been commented on by foreign investigators of international reputation as the greatest single contribution ever published on the subject of the eradication of bubonic plague.

Record should be made of the fact, as is conspicuously shown in the history of the Society, that Sigma Xi has not accepted or followed any narrow definition of research. It has laid the emphasis on creative power in the broad sense and has recognized that the engineer in constructing a bridge or in solving some other technical problem which presents itself in the course of his professional work may manifest the same originality that is shown by the student of natural or physical science in the work more ordinarily called investigation. Sigma Xi has not been blind to the fact that the breeder who seeks to develop a new type of grain or a strain of any given variety of domesticated animal meets an unknown situation that demands as great accuracy in observing, comparing, and utilizing data, as great investigative and creative power as the chemist who strives to build up new compounds or the physiologist who experiments to analyze complicated functions into their component parts. Sigma Xi may justly trace much of her success to this power to recognize original investigation in a higher sense than is embraced in the definition of the scholastic, and may safely rest her future on this readiness to seek and to know the truth wherever it can be found.

MEMBERSHIP RECORDS

A brief pamphlet on the organization of Sigma Xi, printed in 1888 by the Alpha Chapter, gives a list of the chapters with officers and members at that date. It records five chapters with 108 members, of which Cornell had sixty, Stevens six, Rutgers twelve, Rensselaer sixteen, and Union fourteen. On 1893 the second complete list of members was published, also by the Alpha Chapter; this list included only four chapters, but the membership roll had grown to 318, distributed as follows: Cornell, 196; Rensselaer, 48; Union, 36; Kansas, 38. Since then no general record of the membership has been published up to the date of the present work.

Many partial records have been prepared by different chapters. Kansas printed in 1899 the first membership record of an individual chapter and in 1905 published a supplement list. The Yale Chapter issued a complete chapter record in 1905. In 1907 both Columbia and Union published such lists, and Minnesota did the same in 1908.

The growth of Sigma Xi in membership may be traced in the statistical tables appended to the convention proceedings. Such data were first included in the Proceedings of the Fourth Convention, 1899,

although in brief form. They have grown more complete in recent years. In the earlier years, the series is biennial only; and in some cases the figures conform to the time of printing the pamphlet, while in others they agree with the date of the convention. Unfortunately, also, these data contain evident and sometimes serious errors due to various causes, and it was difficult to get the series corrected by the chapters, as the officers responsible for them had retired and the errors were not easy to check. Hence the lists of names submitted by the various chapters for this Record were collated and the results are given in the form of tables appended to this discussion (page 32). Even this method has not yielded results that are comparable in all respects, but the figures do not depart widely from the truth, although they differ distinctly from the data given in the Proceedings of earlier date.

The lists of names printed in the Record do not afford any basis for determining the active membership and the table showing this is made from the earlier Convention Proceedings. It does not cover the time before 1899 but even then Sigma Xi had only eight chapters, in which the largest active membership was 68 at Cornell, whereas three out of the eight chapters had less than 25 members each at that date. The total working membership in that year was only 279. In 1911 every chapter of the first list but one had doubled or trebled its active membership, and the new chapters had brought the total active membership up to 1,868, a sixfold increase in twelve years.

The data on total membership are grouped under 26 calendar years, covering the 25 years of the Society's history. From this table it appears that after ten years of existence Sigma Xi listed 645 members in six chapters. Five years later it had nearly tripled its membership, having 1,559 members in twice as many chapters as before. Again in 5 years it more than tripled its membership and at the same time doubled its chapter list, having 4,090 members in 23 chapters. In the last five years the total membership has almost doubled again, reaching the grand total listed in this volume of 7,498 members in 28 chapters. Cornell is the only chapter which has yet passed the thousand mark and Yale the only other that has half as many, although four others have reached close to the five hundred limit.

The table giving the annual elections to membership enables one to determine the character of the growth made by the Society and its individual chapters. For ten years the total annual increment never reached 100, even including the charter members of newly organized chapters. It rose to 260 in the fifteenth year, to 612 in the twentieth, and to the maximum of 731 in the twenty-third, only to fall again to 659 in the twenty-fifth year. The number of graduate students elected in the first ten years was very small, probably because there were not many available. In recent years the selection of graduate students has been more marked. In this the Society has only followed the growth of graduate instruction in the institutions in its membership. Of the present total membership recorded in this volume, 601, or 8 per cent, were charter members, 3,153, or 42 per cent, were elected from the undergraduates, 2,061, or 28 per cent, were chosen as graduate students, 1,334, or 18 per cent, as faculty members, and only 349, or less than 5

per cent, as alumni members. Probably the last figures should be raised, as some chapters seem to have entered alumni members under graduate elections to membership. Even with that it appears that the chapters have not availed themselves to any large extent of the privilege of electing alumni members. The classified totals also show that the chapters differ widely in their policy, as some have elected large numbers of undergraduate members and others have confined their elections almost wholly to graduate students.

In consulting the tables it should be borne in mind that by order of the Washington Convention the chapter rolls for this Record closed with December 31, 1911. If the reader wishes to study the record of an individual chapter he will follow the horizontal line introduced by the name of the chapter. On the other hand the vertical columns show the condition of the Society in any given year and the successive totals trace the changes in the entire organization during the quarter century of its history just completed.

CONSTITUTION
OF THE
SOCIETY OF THE SIGMA XI

AS AMENDED DECEMBER 28, 1911

ARTICLE I

NAME AND OBJECT

SECTION 1. The name of this organization shall be the SOCIETY OF THE SIGMA XI; its motto *Σπουδῶν Ἐυνῶνες* Companions in Zealous Research.

SEC. 2. The object of this Society shall be to encourage original investigation in science, pure and applied, by meeting for the discussion of scientific subjects; by the publication of such scientific matter as may be deemed desirable; by establishing fraternal relations among investigators in the scientific centers; and by granting the privilege of membership to such students as during their college course have given special promise of future achievement.

ARTICLE II

CHAPTERS

SECTION 1. Chapters may be established at any institution offering courses of study in those subjects which it is the object of this Society to promote, provided that these courses are substantially equivalent to the usual four-year college course. [See Appendix I, II.]

SEC. 2. Alumni chapters may be established at any place other than an institution of learning on the application of not fewer than five alumni members of collegiate chapters; and such alumni chapters shall have all the powers and privileges of collegiate chapters except as hereinafter provided.

SEC. 3. A petition for a charter for the establishment of a new chapter shall be communicated to the president of the Society, who shall refer it to the chairman of the Council. When the chairman shall have notified the president of the consent of three-fourths of the members of the Council, the president shall then refer the petition to the several chapters in good standing in the Society. No charter shall be granted without the consent of three-fourths of the Council, and of three-fourths of the chapters. The consent of a chapter shall only be given at a chapter meeting. In all chapters whose membership is fifty (50) or less, the quorum required in order to vote upon the admission of new chapters shall be one-half the active membership, and in all other chapters the quorum shall be twenty-five. Three-fourths of the votes cast must be in the affirmative in order to give consent.

SEC. 4. Chapters not reporting their votes on a question submitted by the Council within a period of six (6) months from the time the question is submitted, shall be regarded as having voted in the affirmative on said question. This amendment shall apply only to the votes of chapters on the admission of new chapters.

SEC. 5. A charter for the establishment of a new chapter shall be issued as soon as the president has received notification of the consent of the requisite number of chapters.

SEC. 6. The form of charter shall be as follows:

To whom it may concern: Be it known that a Charter for the establishment of a chapter of the Society of the Sigma Xi at..... is hereby granted to the following persons as Charter Members, conveying to them and their duly elected associates and successors all the privileges conferred by the Constitution of the Society:

.....

In witness whereof the signatures of the President and Secretary and the seal of the Society are hereunto affixed on this the _____ day of _____ in the year of our Lord _____.

SEC. 7. There shall be at least three meetings of each chapter during the college year.

ARTICLE III

MEMBERSHIP

SECTION 1. The Society shall consist of active, alumni, and honorary members.

SEC. 2 (a) The active membership of the chapter at any institution shall be composed of such resident professors, instructors, graduate students, and undergraduates as are members of the Society. The alumni membership of the chapter shall consist of former active members no longer connected with the institution, and such graduates as may be admitted to membership under the provision of Section 5; they shall have all the privileges of active members when present at any meeting of their chapter, except that they shall not vote at the election of new members. Members of any chapter who may become connected with another institution at which there is a chapter shall be entitled to enrollment as active members in the latter, on presenting satisfactory credentials.

(b) Membership of alumni chapters shall be composed of alumni members of collegiate chapters, and such graduates of other institutions of learning at which there are no chapters of the Society, as may be elected to membership in the Society by alumni chapters.

SEC. 3. Honorary members shall be scientific workers, who have achieved eminence in some branch of pure or applied science. They shall be entitled to all the benefits of the Society, including the right to attend and take part in conventions and meetings, but not the right of suffrage.

SEC. 4. The following, and no others, are eligible to active membership in a chapter at any institution: (a) any professor or instructor of the institution who has shown noteworthy achievement as an original

investigator in some branch of pure or applied science; (b) as a non-resident member, any professor, instructor or investigator, connected with a neighboring educational, scientific, or professional institution not having a chapter, who would otherwise be eligible for active membership; (c) any resident graduate who has by actual work exhibited an aptitude for scientific investigation; (d) any undergraduate in the fourth year class, or else in the class substantially equivalent thereto, who has given promise of marked ability in those lines of work which it is the object of this Society to promote. [See Appendix I, II, VI.]

SEC. 5. Any graduate of the institution of not less than five years standing is eligible to membership on the same conditions as prescribed for professors and instructors in (a) of Section 4.

ARTICLE IV

ELECTION OF MEMBERS

SECTION 1. Active members shall be elected for any chapter by the active membership of such chapter in the manner to be hereinafter defined.

SEC. 2. The election of members, when performed by the active membership as a body, shall be by ballot.

SEC. 3. When the election is according to Section 2 an affirmative vote of three-fourths of the active members present shall be necessary for election.

SEC. 4. When the active membership of a chapter exceeds twenty-four, the election of new members may be accomplished in the following manner:

Nominations shall be made by active members in writing, presenting together with the name of the nominee full testimony of his eligibility signed by the nominator and a seconder. Such written nominations shall be sent to the chapter's recording secretary and by him forwarded to the chapter's president, who shall be chairman *ex officio* of a board of electors, of a membership fixed by the chapter, but which at no time shall be less than five in number. This board shall be selected from the active members by ballot at the annual election of the chapter's officers; vacancies occurring thereafter to be filled by the board itself. A unanimous vote of the above board shall be necessary for election. [See Appendix IV.]

SEC. 5. The number of undergraduates elected during any one year shall not exceed one-fifth of the senior class in the scientific and technical courses.

SEC. 6. Honorary members shall be elected only at a convention of the Society, and by a vote of three-fourths of the delegates present.

ARTICLE V

INITIATION

SECTION 1. Such persons elected as provided for in Article IV, shall, before they exercise the privileges of membership, be initiated at such time after the election as the by-laws of each chapter shall designate, according to the following form:

Form of Initiation.

SEC. 2 (a) The members-elect shall be ushered into the presence of the chapter by a marshal or marshals to be appointed by the president for the occasion.

(b) The president or his deputy shall explain the aims and objects of the Society.

(c) The president shall next read the following pledge, to which each novitiate shall in turn assent as his name is called: Do you hereby pledge yourself to uphold the principles of the Society of the Sigma Xi, and assume the responsibilities incumbent upon active membership therein?

(d) The president then addressing those who have taken the pledge, shall formally pronounce them admitted to membership in the Society of the Sigma Xi, and shall invite them to sign the constitution.

(e) Each new member shall affix his signature to the Constitution, and shall then receive from the president the certificate of membership.

(f) The president shall present the new members to the chapter.

SEC. 3. Should any member-elect be unavoidably absent from the general initiation, he may, at the pleasure of the chapter, be provided with an opportunity to assent to the pledge given in Section 2 (c) and to sign the Constitution, and the president shall then formally admit him to the Society, and present him with the certificate of membership.

Certificates of Membership

SEC. 4. The certificate of membership of this Society shall bear the signatures of the president and secretary of the chapter, and the seal of the Society.

The form of the certificate should be as follows:

The Society of the Sigma Xi by this diploma certifies that _____ was on the _____ day of _____ in the year _____ duly elected to membership in the _____ Chapter of the Society of the Sigma Xi, and is fully entitled to all privileges granted by its constitution.

ARTICLE VI

INSIGNIA

SECTION 1. The badge or symbol to be worn by members of this Society shall be a gold watch-chain pendant, charm, or pin of octagonal shape, bearing the monogram of the Greek letter Sigma, superimposed upon the Greek letter Xi. The monogram may be jewelled, enameled, or embossed as desired. On the reverse side or back of the badge shall be engraved in the upper line the name of the college in which the owner was initiated, together with the date of such initiation. Also on the reverse, in the center shall be placed the chapter symbol in the middle of the numeral of the year in which such chapter was chartered. On the lower line shall be the owner's name, together with the numeral of the class in which he graduated and the name of such college where graduation took place. Provided that the continued use of the older design of the badge shall be optional with the several chapters.

SEC. 2. The colors of this Society shall be electric blue and white.

SEC. 3. The official letter head shall be the monogram of the Society.

SEC. 4. The Seal shall consist of a wreath of laurel, typifying the honorary character of membership in the Society, arranged as an oval enclosing the words "THE SOCIETY OF THE SIGMA XI" at the top, and the motto "Σπουδῶν Συνῶνες" at the bottom. These words shall form an inner oval concentric with the first, punctuated with ten stars, and enclosing a field illuminated by the lamp of research. Above the lamp in the field of illumination shall be placed the monogram "ΣΞ," and below it the date of foundation, 1886.

ARTICLE VII

OFFICERS AND COUNCIL

SECTION 1. The officers of the Society and of each chapter shall be a president, vice-president, a recording secretary, a corresponding secretary, and a treasurer.

Election of Officers

SEC. 2. The officers of the Society shall be elected only at conventions. The terms of office shall be as follows:

President	2 years
Vice-President	2 years
Recording Secretary	2 years
Corresponding Secretary	4 years
Treasurer	2 years

The term of office of the corresponding secretary shall begin at the close of the convention at which he is elected, and continue until the close of the second biennial convention after his election, or until his successor is elected.

The terms of the other officers shall begin immediately after their election, and continue until the close of the next biennial convention, or until their successors are elected.

SEC. 3. The officers of the several chapters shall hold office for similar periods, unless otherwise provided for by the by-laws.

SEC. 4. A plurality of votes shall suffice for the election of any officer.

Duties of Officers

SEC. 5. The duties of the officers of the Society and of the several chapters shall be those which usually pertain to the several offices. In addition thereto the corresponding secretary shall hold and preserve all the papers, except the current records, of the Society or chapter respectively.

The Council

The Council shall be composed of the past presidents of the Society, the officers of the Society, *ex officio*, and an additional member to be elected by each chapter from its active members. The term of an elected member shall be three years; one-third of the elected members shall retire annually. Whenever a vacancy occurs, a successor shall be elected at once by the regular electors for the remainder of the term. The presi-

dent shall name one of the elected members as Chairman and a second member as Secretary to serve to the end of their terms as councilors.

Duties and Powers of the Council

SEC. 7. (a) The Council shall be the executive committee of the Society.

(b) It shall advise on the general policy of the Society.

(c) It shall consider and vote on the granting of charters as provided for in Art. II, Sec. 3, and on the basis of the following recommendations:

1. That the Council, in determining the award of a charter to an institution, should give a close scrutiny to the facilities and opportunities of the institution for the advancement and encouragement of original research in the various branches of science, and to the qualifications of its scientific faculty to accomplish these ends.

2. That the number of distinct branches of science represented by full professors in the institution should be at least five; and these branches should include mathematics, physics, chemistry, biology (some department of it), and engineering (some department of it).

3. That the number of graduate and resident members of the institution required to make the charter membership should be at the least ten; and of these not less than nine should be members of the instructing body; and each person should be adjudged by the Council to be fully worthy of membership in the Society.

(d) To meet the expenses of the Society, it shall have full power to levy assessments on all the chapters *pro rata* on the basis of active membership not to exceed fifty cents per active member per year.

(e) It shall submit to each chapter for approval all plans for extraordinary appropriations not covered by the previous paragraph (d). A three-fourths vote of the chapters shall be required for such approval.

(f) It shall nominate officers for the general society and shall notify each chapter of such nominations three months in advance of the time of election. Additional nominations may be made by any chapter or group of chapters, and notice of such nominations should be sent to each chapter six weeks in advance of the time of election.

ARTICLE VIII

CONVENTIONS

SECTION 1. A regular convention of the Society, consisting of delegates from each chapter, shall be held annually. Special conventions shall be called by the president on the written demand of one-third of the active chapters, and three months' notice of the date and special objects of such convention shall be sent to each chapter. [See Appendix V.]

Delegates

SEC. 2. (a) Each chapter in good standing shall be entitled to a representation of three delegates at each convention.

(b) The delegates representing any chapter shall be chosen from its active or alumni members; except that in case any chapter shall be un-

able to send its own members, it may appoint members of any other chapter as its representatives.

(c) In convention the votes shall be by chapters, each chapter having one vote.

(d) The expenses of delegates shall be paid by the chapter sending them.

(e) Any vacancy caused by disability of, or resignation of the secretary, corresponding secretary, or treasurer, shall be temporarily filled by an appointment by the president until such office is filled by vote of the convention.

Credentials

SEC. 3. (a) The appointment of each delegate shall be certified to by the secretary of the chapter appointing him, in a letter to the committee on credentials of the convention.

(b) These credentials shall be presented to this committee in person by the delegate.

Order of Business

SEC. 4. (a) Appointment by the president of three members to serve as a committee on credentials.

- (b) Report of committee on credentials.
- (c) Reading of the proceedings of the last convention.
- (d) Reading of the president's report.
- (e) Reading of the treasurer's report.
- (f) Reading by delegates of the chapter reports.
- (g) Reading by the secretary of the reports of chapters having no delegates present.

- (h) Reports of committees.
- (i) General business.
- (j) Election of officers.
- (k) Selection of time and place for the meeting of the next convention.

(l) Adjournment of business meeting.

(m) Public session.

Quorum

SEC. 5. Delegates from three-fourths of the chapters in good standing in the Society shall constitute a quorum at a convention.

ARTICLE IX

EXPENSES

SECTION 1. Expenses of the Society which shall be voted by conventions shall be met by an assessment on the several chapters, *pro rata*, on the basis of their active membership.

ARTICLE X

AMENDMENTS

SECTION 1. This Constitution may be altered or amended at a convention, by a vote of two-thirds of the chapters represented.

SEC. 2. Amendments can be brought before the convention only when recommended by some chapter.

SEC. 3. Notification of any proposed amendments to this Constitution must be sent to each chapter by the corresponding secretary of the Society, at least three months before the time of the convention at which such amendments are to be considered.

APPENDICES

The following appendices consist of extracts from the Society's convention records bearing on matters of general policy and administration. They have regularly been printed in the pamphlet entitled Constitution of the Sigma Xi and have been regarded as expressions of policy by the General Convention for the general advice of individual chapters.

APPENDIX I

Report of the committee on policy of extension, Convention of 1895

"The policy of the Society in the establishing of new chapters is a matter of vital importance to its future growth and standing.

"The Society was established in 1886 by a few earnest workers in the engineering sciences, as a means of rallying and encouraging those qualities which were deemed of the first importance in their own lines of investigation. It soon became broadened and enlarged to represent the general ideals of highest scholarship in the minds and before the ambitions of every earnest student in any branch of science. It proposed to recognize and elect to its membership those men in our institutions of learning who should exhibit in a marked degree the qualifications of natural endowment and training required for successfully conducting original research in the various branches of science.

"Thus *original research* bears the same relation to Sigma Xi as literary scholarship does to Phi Beta Kappa; and it is believed that the cause of original research, and that part of the higher education which trains the qualities required in scientific pursuits, will be benefited by honoring with election to Sigma Xi those men who during their college course show marked proficiency in these directions.

"In founding new chapters the Society should realize its responsibility and should not grant a charter to every institution that may think itself properly equipped to teach science; but on the contrary great care is necessary in establishing chapters, in order to ensure the proper discrimination of men who are to go forth as representatives of the best results of scientific education in the United States. To attain these ends our policy should be eminently and sternly conservative, while at the same time we should be fully alert and sensitive to the needs of progress in science and education.

"We should not plant the Society in any institution which has not already developed a clear appreciation of the dignity and needs of the scientific education, and a vivid realization of the distinction between scientific and literary ability. In order to make Sigma Xi an honor society it is essential that the men of first rank in the institution be given election, and this will not be possible where Phi Beta Kappa sets the

only standard of excellence, and scientific men are ranked as only second to literary scholars.

"In establishing a new chapter, therefore, we should not take into consideration any claim of advantage to accrue to the institution by such chapter, or any mere desire of individuals to become members of the Society; but in each case we should make sure that we entrust the power of distributing the honor of membership only to such persons and institutions as are capable of giving the education and training necessary to the carrying on of scientific investigation, and as have shown by their organization and equipment that they know the requisite qualifications, and are likely to confer the honor where it properly belongs.

"We should not only look for this active and pervasive spirit of research, but we should also be well assured of the hearty co-operation of the scientific faculty in the establishment of the local chapter, and in maintaining its standing in harmony with the interests of the Society."

Recommendations, Convention of 1895

"In order to secure these ends, upon motion of the chairman *pro tempore*, the following recommendations were adopted, regarding the policy of the Society in establishing new chapters:

"(1) That the Council, in determining the award of a charter to an institution, should give a close scrutiny to the facilities and opportunities of the institution for the advancement and encouragement of original research in the various branches of science, and to the qualifications of its scientific faculty to accomplish these ends.

"(2) That the number of distinct branches of science represented by full professors in the institution should be at least five; and these branches should include mathematics, physics, chemistry, biology (some department of it) and engineering (some department of it).

"(3) That the number of graduate and resident members of the institution required to make up the charter membership should be at least 10; and of these not less than 9 should be members of the instructing body; and each person should be adjudged by the Council to be fully worthy of membership in the Society."

APPENDIX II

Extract from presidential address, Convention of 1897

"The Society, if rightly guided, may take a place of leadership in the movement now going on to place science on an equality, so far as it deserves it, with literature as an element in the highest liberal education. Science at present owes its place in the higher education rather to its value as a direct means of attaining success in practical ways than to its value in general education. As such, science is to be compared rather with law, medicine or theology—technical fields of study, than with language, literature and philosophy, which are the essential factors of a liberal education.

"The time has come for making a permanent place for science among those latter factors of the modern liberal education. In shaping the future policy and extension of Sigma Xi, this thought, if correct, should be kept in mind: Phi Beta Kappa stands for the traditional conception of

the liberal culture, in which precedence is given to literature and what literature contains. In order to win a permanent place for science in that ideal education, it must be demonstrated that the study of science contributes a factor to this ideal which is not and cannot be furnished by the literary branches. This quality we believe to be found in the *ability and promise of original research.*

"In extending the Society we should realize the importance of holding up this educational position of science for recognition and honor. The practical side of science is felt and appreciated more in the institutions of the West where progress and activity are more vigorous; the value of a broad and liberal education is more deeply appreciated in the East where competition is closer and where the machinery of society and custom is more rigid and exacting. Our ideal for science is broader than either of these. We would exalt the scientific study of things by giving it a place of honor among the humanities of a liberal culture, and we would give new vigor to scholastic study by infusing into it the live practical problems of modern science."

APPENDIX III

Extract from records, Convention of 1897

"Some discussion arose as to the use of Greek letters for designating the chapters. It was moved and carried that any officer may when he pleases use the ordinary (or geographical) name of a chapter instead of its Greek letter."

APPENDIX IV

Extract from records, Convention of 1899

"The following resolution was moved and carried: That the Society suggests to the several chapters that when the method of election is employed as provided for in the Constitution, Article IV, Section 4, as amended in 1899, the action of the board of electors be referred to the chapter for formal ratification."

APPENDIX V

Extract from records, Convention of 1899

"Moved and carried that the regular time of the meeting of the conventions of the Society be the Tuesday evening of the week of meeting of the American Association for the Advancement of Science, and the place be the meeting place of the Association, unless otherwise provided for by the officers of the Society."

APPENDIX VI

Extract from address of President Williston, Convention of 1902

"The object of the Society is to weave a closer bond between those actuated by the desire of adding to the world's knowledge in science, or of making the world better because of science; to encourage the student in the pathway he has chosen; to support by mutual counsel;

and to remove obstacles by a union of strength—in other words, to co-ordinate, to unify and to promote the spirit of scientific research in the University.

“The pathways of science are already so diverse that we catch but brief glimpses of each other through the tangled growth of unexplored forest—we are constantly forgetting in our own zeal that there are others near by who are as zealous as we, and there seems to be no better way in the University by which we may be occasionally brought into the clearings for mutual advice. As teachers, the one chief bond between us is the training of the young in science—and what is the good of all our labor unless we help others to do better than we have done? It is the mission of the Sigma Xi to draw this bond more closely, to let us not forget that we are teachers above all else.

“Permit me, therefore, to urge upon all the chapters the greater development of the educational and social side of our fraternity . . . I believe that the students should be elected to membership as early as possible, and be given the privileges of companionship and counsel while yet they are of most benefit to them . . . Such a custom is almost sure to bring about greater enthusiasm among both students and faculty, a more full attendance at the meetings, and what is best of all, permits a closer personal relationship between instructors and students . . .

“The Society has served a most useful purpose in bringing into closer relationships not only those who are interested in the discovery of new truths, but also those who seek the new application of old truths. I believe that the full and sympathetic association of the students in all branches of scientific work should be continued—more indeed now than ever before, since the trend of college education is to differentiate early along the lines of professional education. The Society should be further extended among our chief technological schools, schools that are destined to exert a still more powerful influence in the future.”

ALPHA CHAPTER

CORNELL UNIVERSITY, ITHACA, NEW YORK

Parent Chapter

Founded November, 1886

HISTORICAL SKETCH

Sigma Xi arose out of the desire for comradeship in a small group of earnest and scholarly university men, whose tastes and training were along engineering and scientific lines and who found their intellectual ideas not altogether in sympathy with the old established ideals of literary scholarship. They were beginning to realize that the American college is but the culmination of the disciplinary training of the high school, and were quite unconsciously formulating for American education the true university spirit. Although effort had often been put forth to establish an intercollegiate, scientific society, such a body did not come into actual existence until the founding of the Alpha Chapter of this organization.

In the spring of 1886, Mr. William A. Day, a member of the senior class in the Sibley College of Mechanical Engineering at Cornell, suggested the idea of a scientific Phi Beta Kappa to Professor Van Vleck of Sibley College. It is on record that the conversation took place as the two were climbing Buffalo Hill and that before they parted they went to Mr. Van Vleck's room and outlined an organization and a plan of campaign. Seven other members, namely: William H. Riley, Harry E. Smith, William A. Mosscrop, Charles B. Wing, John Knickerbocker, John J. Berger, and Edwin N. Sanderson, of the classes of 1886 and 1887, were taken into their confidence. Of the nine original members five were in the course of mechanical and four in that of civil engineering. One of them had previously studied at Stevens Institute of Technology and at Johns Hopkins University, and three at Rensselaer Polytechnic Institute.

A meeting was soon held at which a temporary organization was effected, Mr. Van Vleck being chosen president.* Although not on record officially, it is, however, generally understood that the late Robert Henry Thurston, then Director of Sibley College, gave much encouragement and advice.

It seems that the idea of these nine projectors did not extend beyond the engineering departments. It so happened that Professor Henry Shaler Williams, at that time head of the department of Geology, was planning the organization of a similar society in his own branch of science. A conference was soon brought about at which Professor Williams successfully urged the formation of a single society to include all

*The minutes of this and of the several subsequent meetings in which the organization was perfected are still in the possession of the Alpha Chapter, and form a part of its permanent records.

departments of pure and applied science. Because of this effort, Professor Williams is generally regarded as one of the ten founders of Sigma Xi, these being symbolized by the ten stars on the seal.* The organization now being in permanent form, Professor Williams was, at the sixth meeting, held May 20, 1887, elected the First President of the Society. The other officers were: Vice-President, F. Van Vleck; Recording Secretary, C. D. Marx; Corresponding Secretary, C. B. Wing; Treasurer, A. W. Smith.

In shaping their constitution these founders sought to emphasize the spirit which drew them together rather than the different aims by which they were personally distinguished. This was the spirit of independent investigation and research—of seeking out and knowing for oneself, as contrasted with learning the traditions of the past. It was a formal embodiment of the "zeitgeist" whose eyes are turned forward, not backward. It is a significant fact that in making elections of new members, the prominent qualification has been, not the acquired knowledge of the candidate, but the shown ability to learn and to progress. Such are true university men, whether they carry on their investigations inside university walls or outside in the busy world of practical life. Although the founders were not fully aware of it, the result has shown that they stood at the parting of the ways for higher education in America.

During the academic year of 1886-7 twelve professors from the various scientific departments, four resident graduates, nine non-resident alumni, and six members of the graduating class were elected. A provisional constitution, which provided for the establishment of other chapters and for a biennial convention, was adopted. Four chapters in other institutions were organized, two of which are now extinct.†

In commencement week of 1887, Professor H. S. Williams delivered the inaugural address, entitled *The Ideal Modern Education*, in which he set forth the aims and objects of the new society. From the time of its organization until the first formal convention (1893) the Alpha Chapter was the controlling body.

The first convention met in the architectural lecture room of Cornell University, May 17, 1893, under the presidency of Professor E. L. Nichols. Delegates were present from four chapters, viz.: Cornell, Union, University of Kansas, and Rensselaer Polytechnic Institute. The essential work of this meeting was the adoption, with slight modifications, of the constitution previously prepared by the Alpha Chapter.

Up to the time of this first convention, the history of the society was largely a history of the Alpha Chapter. Since then, however, the Alpha Chapter has been only one of an ever increasing number of chapters, with a history that presents no especially interesting details. Its membership, active and alumni, is nearly one thousand. It has had, up to the present time (1911), over one hundred and forty meetings, including the initial meetings of organization, previously mentioned. A large number of these meetings have been lectures to which the general public were invited.

At the time Sigma Xi was founded tradition and authority had been the dominant factors in estimating the quality of scholarship. As our Society has grown, and has become a prominent factor in most of our universities, men have come to know that knowledge of the present is far more important than tradition—that individual discernment, power of initiative, and honesty, surpass all authority in the equipment of a scholar of the new sort.

This characteristic of the Sigma Xi spirit is, however, to be distinguished from the "commercial" tendency which was evident in the sturdy engineering students of that time, and the Society stood for intellectual energy rather than sordid ambition.

Although the founders were preparing to use their intellectual training and equipment in the practical affairs of life, and expected to reap personal benefit from such application, they realized that success was to be the outcome of properly applied energies, and that nature was not to be conquered by any kind of sophistry, but by the application of skill and energy in discovering and utilizing her boundless resources. The spirit which dominated in the founding of Sigma Xi, already is dominating the higher universities of America, and the scholar of this new type is taking his place of leadership in all the progress of the new era.

BETA CHAPTER

STEVENS INSTITUTE OF TECHNOLOGY, HOBOKEN, NEW JERSEY

Charter Granted May, 1887

Defunct

HISTORICAL SKETCH

The Chapter was organized with four members of the class of 1884 and one instructor; and only one initiation occurred, one member being elected from the class of 1887. The Chapter existed only during the spring months of the latter year and upon the graduation of this one member, went out of existence.

DELTA CHAPTER

RUTGERS COLLEGE, NEW BRUNSWICK, NEW JERSEY

Charter Granted February, 1887

Defunct

HISTORICAL SKETCH

The exact date of the establishment of the Chapter at Rutgers College is unknown. The five charter members associated with themselves four members of the faculty and four students. The Chapter had a very brief existence and the officers whose names are printed in the earliest record of Sigma Xi seem never to have performed the functions of their positions. Diligent search has brought to light only a manuscript copy of the Constitution and By-Laws of Sigma Xi, filed with material left at the College by departing members of various organizations. Phi Beta Kappa was already firmly established at Rutgers and in the opinion of faculty members the scientific department was too small to support a second organization.

RENSELAER CHAPTER

RENSELAER POLYTECHNIC INSTITUTE, TROY, NEW YORK

Charter Date Unknown

Chapter Installed May 6, 1887

HISTORICAL SKETCH

The Rensselaer Chapter of the Society of the Sigma Xi, originally designated the Zeta Chapter, was established May 6, 1887, at the Rensselaer Polytechnic Institute, Troy, N. Y. The charter membership consisted of seven undergraduates from the senior and junior classes.

This Chapter having been established only six months after the founding of the Society, the installation undoubtedly lacked the formality and importance which attach to the ceremony of the present day; in fact, the Chapter has no account of the installation exercises. The earliest record now in its possession pertains to a meeting held on June 9, 1887, at which time three members of the faculty were elected to membership.

For fifteen years the Chapter was composed of from eight to ten faculty members and such undergraduate students as were deemed worthy of election. This election, usually occurring in April, did not enable the new members to derive much direct benefit from association with the other members of the Society, but to be numbered among the few selected was considered by the student body an honor earnestly to be sought. As there was but one course of study at the Institute, and that arranged to fit the needs of the civil engineer, the selection of members has been based on the promise given of future success in the investigations which are directly connected with the profession of engineering, and the measure of success attained by the graduate members of the Chapter would indicate that their selection had been wisely made.

The phenomenal growth of the Rensselaer Polytechnic Institute during the past seven years—the student attendance having increased from about two hundred to over six hundred—and the establishment in the year 1908 of the new courses of Mechanical and Electrical Engineering have infused new life into the Chapter; the faculty membership has more than doubled and there has been a somewhat similar increase in the student membership. In consequence of these recent important additions to the courses and the superior facilities for study now offered the student in these departments, we look forward to a marked increase in the activity of our Chapter, a wider field of work, and a larger association of resident and undergraduate students who are interested in the investigations which lead to the practical application of science to the continued development of the country's industries.

THETA CHAPTER

UNION COLLEGE, SCHENECTADY, NEW YORK

Charter Dated 1887

Chapter Installed 1887

HISTORICAL SKETCH

Theta Chapter was organized and received its charter in 1887. The establishment of the Chapter was due largely to the efforts of Professor Charles Carroll Brown, who was then Professor of Civil Engineering at Union College, and it has since enjoyed a prosperous career. Several meetings have been held each year for the transaction of regular business, the presentation of papers and the discussion of scientific subjects. Unfortunately the proceedings have never been published.

The Chapter has always been conservative in the election of new members. For this reason selection for membership to Sigma Xi is highly appreciated by our students.

Through the efforts of our president, Doctor James H. Stoller, a directory of Theta Chapter was published in 1907. This directory gives a brief history of each member, his membership in learned societies, and his contributions and publications on scientific subjects.

IOTA CHAPTER

UNIVERSITY OF KANSAS, LAWRENCE, KANSAS

Charter Granted December 4, 1889

No Formal Installation

HISTORICAL SKETCH

As far as can be learned the Kansas Chapter of Sigma Xi has never had a charter, nor was it installed. This is due to the fact that it was one of the early chapters formed.

In the records of the first meeting, held April 21, 1890, the following statements occur: "The chairman reported that permission had been received from the President of the parent chapter of Sigma Xi at Cornell University to establish a chapter of Sigma Xi at the University of Kansas upon the adoption of the constitution of the society. It was voted that a Chapter be organized at the University of Kansas with Professors Bailey, Blake, Marvin, Miller and Snow, heads of the scientific departments, as charter members." In the minutes of the sixth meeting held June 1, 1892, in reporting the adoption of the revised constitution, the name Iota Chapter first occurs.

Sixteen meetings were held up to June, 1896, and in the autumn of that year "frequent meetings" of a combined scientific, business and social nature, began. Since 1899 such meetings are regularly held on the third Thursday of each month of the school year. At these meetings a semi-popular paper or lecture is given, showing recent advances in a special field of science, or results of investigations carried on by the writer or speaker. These frequent meetings, together with the great interest and enthusiasm shown by the early members, have given the Chapter the standing and influence it has today. All the charter members are still active members. The faithfulness of the early members is well exemplified by the first president, Professor F. O. Marvin, who served as president for ten years and who attended twenty-six out of the first twenty-eight meetings held during the first eight years of his incumbency.

Since 1900 the Chapter has alternated with Phi Beta Kappa in furnishing a prominent speaker for the Annual Convocation Week. Aside from this, the Chapter brings at its own expense one or two prominent speakers to the University for popular public lectures. For the last two years one of these has been the Missouri-Iowa-Nebraska-Kansas "circuit" speaker.

Locally, the Chapter was largely responsible for the co-ordination of the work in the high schools of the state, and the University; also, in raising the amount of the required science work. Since 1906 the April meeting is given over wholly to a social program. A banquet is followed by burlesques and "take-offs" on the doings of science and scientists

locally as well as nationally. This is a revival of a custom of the old Science Club, "The It," which was in a way the predecessor of the Iota Chapter in this University. A glance at the list following will show a considerable number of names of persons who have attained eminence in some line of work.

Members of T B II who are members of the faculty are allowed to affiliate and enjoy all privileges except that of voting.

W. J. B.

YALE CHAPTER

YALE UNIVERSITY, NEW HAVEN, CONNECTICUT

Charter Dated March 8, 1895

Chapter Installed March 29, 1895

HISTORICAL SKETCH

The Yale Chapter, organized in 1895, was a direct result of a movement on the part of the senior class (1895) of the Sheffield Scientific School for a society which should stand for high scholarship in science. The matter had been discussed annually for several years during which many plans were considered, when finally the above class with the approval of the faculty, voted to establish a chapter of Sigma Xi. Professor Henry S. Williams of the Yale Chapter, formerly of Cornell, and one of the founders of the parent chapter, deserves special mention for his valuable advice and help to the organizers. The Academic Department, the Medical School, and the Forest School, share with the Sheffield Scientific School in the election of members and the management of the Chapter.

In its development at Yale, the society has not held meetings for the reading of strictly technical papers. These are left to the various research clubs, such as the Physical, Chemical, Biological, Mathematical, and Engineers' clubs. The field of Sigma Xi here is to encourage scientific work, not to do it. It accomplishes this by papers and lectures of general scientific interest, by discussion of matters common to all investigators, and by social intercourse of its members. As a fraternity of scientific workers and as an honorary scholarship society, a real want of the university life is supplied. The part played by the undergraduates is necessarily limited: elected near the end of their college course, attending a few meetings, becoming a little better acquainted with their instructors, wearing the society emblem, they enter upon their life work stimulated in some degree at least by the traditions and aims of Sigma Xi.

MINNESOTA CHAPTER

UNIVERSITY OF MINNESOTA, MINNEAPOLIS, MINNESOTA

Charter Dated April 23, 1896

Chapter Installed May 13, 1896

HISTORICAL SKETCH

The charter for a chapter at the University of Minnesota was granted April 23, 1896. Professor H. E. Smith, a member of the Alpha Chapter, presented the charter to the petitioners, who were installed as charter members at a meeting held May 13, 1896. A temporary organization was effected and arrangements were made for a permanent organization, and on May 14 the constitution and by-laws were provisionally adopted. The regular officers were elected and installed on May 15, and at the same meeting committees were appointed and the permanent organization was effected. The committee on extension reported May 18 and new members were elected from the faculty and graduate school. At a meeting held May 25, the constitution was adopted and new members were elected from the senior class. The first initiation was held with a banquet, June 2, 1896, since which time the annual banquet with the initiation has become an important event in the yearly calendar and is well attended by the alumni members. In response to an invitation from the Chapter, Doctor Henry T. Eddy gave the first Sigma Xi Commencement oration in the University Chapel June 3, 1896.

In February, 1898, a joint committee of Phi Beta Kappa and Sigma Xi entered into an agreement to provide for an oration at each Commencement, the societies to alternate in supplying a speaker. The agreement was ratified by both societies.

During the season of 1899 the Chapter had a representative at the Marine Biological Laboratory at Woods Hole.

In addition to the biennial Commencement oration many lectures have been given before the Society by distinguished scientists. One or two meetings a year have been devoted to a study of new apparatus, and an examination of new installations in the laboratories. Besides these meetings, the Society has had each year at least one social meeting.

NEBRASKA CHAPTER

UNIVERSITY OF NEBRASKA, LINCOLN, NEBRASKA

Charter Dated June 24, 1897

Chapter Installed June 5, 1897

HISTORICAL SKETCH

The organization of the Nebraska Chapter in 1897 was due mainly to the efforts of Professors Fred W. Card and A. L. Candy, who had been active members of chapters elsewhere, Professor Card at Cornell University and Professor Candy at the University of Kansas. After conferring with a number of their colleagues at the University of Nebraska, a petition was presented to the General Council, asking for a charter. Official notice was received by Professor Card on June 1, 1897, that such a charter had been granted and the Chapter was accordingly organized on June 5, 1897, with thirteen charter members, all chosen from the faculty. Professor Card became the first president.

The largest number initiated in any one year was thirty-six, in 1898, the year following the organization of the Chapter; of this number twenty-five were taken from among the graduates of the university. The smallest number elected in any one year was nine in 1902, only two from the senior class being selected.

There have been held in all, since the organization of the Chapter and up to the end of the year 1909-10, seventy-three meetings, at forty of which papers and addresses were presented; the latter meetings were of three different types: those for the presentation of technical papers in which the research work of our own members was presented; meetings to which the public was invited, in which results of a more popular nature were set before them; and occasionally, especially at the mid-winter Commencement season, a similar program with a speaker invited from a sister Chapter.

Besides these meetings of the Chapter, regular and special, there have been held each year one or more functions of a social nature, either a gathering at the home of one of the members for the sake of better acquaintance with each other, or more frequently, especially in connection with the mid-winter address, or the initiation of new members, a banquet at one of the hotels, preceded by a social hour and followed by a program of after-dinner speeches.

OMEGA CHAPTER

OHIO STATE UNIVERSITY, COLUMBUS, OHIO

Charter Dated June 1, 1898

Chapter Installed December 10, 1998

HISTORICAL SKETCH

The Omega Chapter of the Society of the Sigma Xi was established at Ohio State University in 1898 with twenty-seven charter members who were members of the faculty.

The Chapter has grown from year to year until at the time of this writing there are some eighty-five members of the instructional staff of the Ohio State University and graduate students of this institution who are members of the Omega Chapter. Each year members are elected from the faculty, the graduate school and the senior class. One piece of published research at least is required of a faculty member before he is eligible for election to membership.

On the night of February 14, 1904, the charter and records of this Chapter were destroyed, in the burning of the chemistry building. A committee was appointed to prepare new records, by-laws, etc., but of necessity these records so restored are at best incomplete.

During the past half dozen years the Chapter has been active in research, many publications representing a large number of fields of work have come from its members. In addition this Chapter has given a series of at least three public lectures each year. These lectures are given by men noted for research and coming to us from other universities and vocations in life. Each year a public lecture is given by a member of the Society.

Four years ago the Chapter was enabled to establish a lectureship foundation for a period of five years through the generosity of a leading citizen of Columbus, Mr. J. C. Campbell. It is hoped that at the end of this period a permanent endowment fund may accrue to the society. The nine lecturers upon the J. C. Campbell Foundation thus far, and in the order of their appearance, are: Professor Starr of the University of Chicago; Doctor Wiley, U. S. Bureau of Chemistry; Professor Barnard, the University of Chicago; the late Doctor Ricketts of the University of Chicago; Doctor Munsterberg of Harvard College; Doctor Stiles of the U. S. Public Health and Marine-Hospital Service; Doctor Michelson, the Nobel prize physicist, of the University of Chicago; Professor Bailey of Cornell University; Colonel G. W. Goethals, Chief Engineer of the Panama Canal.

PENNSYLVANIA CHAPTER

UNIVERSITY OF PENNSYLVANIA, PHILADELPHIA, PENNSYLVANIA

Charter Dated January 4, 1900 Chapter Installed March 20, 1900

HISTORICAL SKETCH

The establishment of the Chapter of the Society of the Sigma Xi at the University of Pennsylvania was due to the initiative of Doctor Edgar F. Smith. Late in the year 1898 a petition for a charter was signed by twelve members of the faculty and presented to the Society, but owing to delays from various causes the charter was not issued until January 4, 1900.

On January 31, 1900, a temporary organization of the petitioners was effected. On March 20, 1900, the Chairman of the Council, Professor Edward L. Nichols of Cornell, performed the initiation ceremonies and presented the charter to The Society of the Sigma Xi at the University of Pennsylvania. The first president was Professor George F. Barker, and the first recording secretary, Professor Edwin S. Crawley.

At a meeting on April 12, 1900, Professor Edgar F. Smith was elected counselor, a position which he has since continued to fill.

It is the policy of the Chapter to hold the election of new members early in the second half of senior year, so that they enjoy the regular proceedings of the society before graduation.

On the afternoon of Commencement Day this Chapter regularly unites with the Pennsylvania Chapter of Phi Beta Kappa in public exercises with a speaker invited alternately by the societies.

BROWN CHAPTER

BROWN UNIVERSITY, PROVIDENCE, RHODE ISLAND

Charter Date April 16, 1900

Chapter Installed, May 9, 1900

HISTORICAL SKETCH

Previous to the year 1900 Phi Beta Kappa was the only honorary society existing at Brown University. As candidates for the engineering degrees were not eligible to membership to Phi Beta Kappa at this University, it was felt by some members of the faculty that it would be desirable to establish an honorary scientific society at Brown University. Accordingly, on January 18, 1900, a meeting of members of the faculty engaged in teaching branches of pure and applied science was held at which the first tangible step was taken toward the formation of a chapter of Sigma Xi. On January 25, 1900, twenty-six members of the faculty petitioned for a charter and on May 9 were initiated as members of the Brown Chapter, by Professor H. S. Williams, of Yale University, President of the National Society of Sigma Xi. It has been impossible to locate the charter, so the date it was drawn cannot be given. [It is entered as stated in the official announcement on file.]

During the period from 1900 to 1908, inclusive, the Brown Chapter has elected five faculty members, fifteen alumni members, twenty-eight resident graduate members, and forty-seven undergraduate members.

The Brown Chapter has endeavored to promote the interests which it is the object of Sigma Xi to encourage, by discrimination in the election of members and by holding public and Chapter meetings at which scientific topics are discussed by investigators in various branches of research work.

IOWA CHAPTER

STATE UNIVERSITY OF IOWA, IOWA CITY, IOWA

Charter Dated June 22, 1900 Chapter Installed November 14, 1900

HISTORICAL SKETCH

On June 22, 1900, a charter was granted for the establishment of "a Chapter of the Society of the Sigma Xi at the State University of Iowa." There being no other chapter of Sigma Xi in the state of Iowa at the time, the Chapter designated in its charter by the phrase quoted above decided to call itself the "Iowa Chapter," a name which has continued to the present time without the use of a chapter letter.

The Iowa Chapter of the State University of Iowa was installed with twelve charter members. In the election of new members, the policy of the Chapter has ever been conservative, hence it is that at the end of its tenth year the total membership reaches only one hundred and sixty-one. Of this number, fifty-one are active members.

It was decided early in the history of the Chapter that two public lectures should be attempted each year; one of these to be given early in the fall by the retiring president of the Chapter; the other to come as near to February 22 as possible and to be delivered by some distinguished investigator outside the Chapter. The plan so adopted has been adhered to consistently, and these two lectures have become established University functions.

In addition to these two occasions when the entire University is invited as guests of the Chapter, several closed meetings are held throughout the year at which reports on researches in progress are made by the members. These, together with the business meetings, have served to unify the scientific interests of the University to a highly desirable degree.

STANFORD CHAPTER

LELAND STANFORD JUNIOR UNIVERSITY, PALO ALTO, CALIFORNIA

Charter Dated December 16, 1901 Chapter Never Formally Installed

HISTORICAL SKETCH

Stanford Chapter of Sigma Xi was organized at the initiation of a number of resident members of the Stanford faculty holding membership from other institutions. Of this group of fourteen who became the charter members of this Chapter, ten were members of the Alpha Chapter at Cornell University. The charter was granted December 16, 1901, and the Society held its first meeting January 23, 1902.

As a matter of general policy, membership has been restricted almost entirely to graduate students who have either completed a creditable piece of research work or have otherwise given undoubted evidence of their ability to carry on original investigation. Undergraduates of senior standing are elected very rarely, so the resident active membership of the Society has never been large. The activities of the Society have been limited thus far to occasional formal lectures by prominent scientists and to the promotion of social intercourse among the members.

CALIFORNIA CHAPTER

UNIVERSITY OF CALIFORNIA, BERKELEY, CALIFORNIA

Charter Dated January 1902 Chapter Installed February 19, 1902

HISTORICAL SKETCH

Early in the fall of 1901 Professor W. A. Setchell called together the members of Sigma Xi known to be present on the faculty of the University of California, to discuss the advisability of organizing a Chapter of Sigma Xi at this institution. They were Professors W. A. Setchell and W. C. Morgan of the Yale Chapter together with Professors C. L. Cory, A. R. Ward, A. S. Eakle, W. L. Jepson, and J. N. LeConte, of the Cornell Chapter.

After a discussion, in which the sentiment was unanimous in favor of asking for a charter for a local Chapter, a committee consisting of Professors Setchell and Eakle was appointed to petition for a charter and to draw up a set of by-laws for the Chapter.

The special committee appointed at this meeting formally presented a petition to the Council for a charter, which was duly passed upon and granted, and the first regular business meeting of the California Chapter of the Society of Sigma Xi was called to order on February 19, 1902, by Professor Setchell.

The committee appointed to petition for a charter and to draw up a set of by-laws for the Chapter announced that a charter had been granted, and they presented a set of by-laws, which were adopted, after which an election of officers was held.

Five meetings were held before the close of the college year, mostly devoted to the transaction of business and the election and initiation of new members from the student body, as well as from the faculty. During the seven years of the Chapter's existence since this time an average of eight meetings a year have been held. Some of these meetings have been for the transaction of business only, but usually papers or addresses have been presented on these occasions, sometimes of a popular nature and open to the public, but more often the meetings have been restricted to the members of the Chapter.

In the fall of 1903 the Chapter decided to abandon the method of election of new members by general vote of the Chapter, and substituted for it an Electoral Council consisting of the President and Recording Secretary and seven other members, who are elected annually. After investigation of any candidates nominated for membership in the Society, the Council elects such a number of them as they consider worthy.

A joint meeting of the Stanford and the California Chapters was held September 23, 1905, with a banquet at the California Hotel, San Francisco, in honor of Professor S. W. Williston, Past President of the

National Society. Thirty-three members of the California Chapter and sixteen members of the Stanford Chapter were present. Toasts were responded to by President Jordan and Professors Williston, Wing, Torrey, and Stringham. Professor Miller of Stanford presided.

The first of a proposed series of annual joint meetings of the Stanford and California Chapters of Sigma Xi was to have been held on Saturday, April 21, 1906, at the California Hotel, San Francisco. On account of the fire of April 18, the meeting was indefinitely postponed, and no actual joint meetings have since been held, although the plan is still adhered to.

In view of the fact that the local authorities were doing nothing to combat the spread of bubonic plague through the town of Berkeley, the local Chapter of Sigma Xi actively interested itself in stirring up sentiment to compel the adoption of preventive measures. A special committee was appointed to investigate the conditions actually existing in the region about San Francisco Bay and to report to the Society. They presented an exhaustive review of the situation and made recommendations for its betterment. Inasmuch as public funds were not available for the purpose of sanitary measures, the Chapter started a subscription among its own membership and in a few minutes raised three hundred and twenty-five dollars. This was the beginning of a public subscription for sanitary work in the town of Berkeley, which afterwards amounted to more than ten thousand dollars.

The report of the investigating committee was printed for local distribution, and has since been sent upon request pretty widely throughout the country, to the various health officers. Various clubs and civic organizations throughout the town were organized for the work, public meetings were held, and a live interest in the situation was stirred up throughout the community, with the result that the danger seems to have been completely averted.

In an academic way also the Chapter is taking a very keen interest in local conditions, and after thorough investigation has made recommendations on one or two occasions which have been adopted and carried out by proper authorities in the University.

COLUMBIA CHAPTER

COLUMBIA UNIVERSITY, NEW YORK CITY

Charter Dated December 1, 1902 Chapter Installed December 19, 1902

HISTORICAL SKETCH

For more than a year before the charter was granted to the Chapter of Sigma Xi at Columbia University, the matter of petitioning the Council of the Society was under discussion. The subject was especially agitated by Lucien M. Underwood, Professor of Botany, and James F. Kemp, Professor of Geology, the latter having been initiated at Cornell during the first year of the Society's existence. Columbia was by this time well established at its new site and the conditions were ripe to carry the petition through. It was finally drawn up and signed by the following members of the faculty in the order given—

James F. Kemp, (Cornell Chapter)	Henry E. Crampton
William J. Gies, (Yale Chapter)	James H. McGregor
Edmund B. Wilson	George A. Lawrence
Henry Fairfield Osborn	Gary N. Calkins
Robert S. Woodward	Alfred J. Moses
Lucien M. Underwood	Bashford Dean
William Hallock	Marston T. Bogert
James McKeen Cattell	Walter S. Sutton (Kansas Chapter)
Livingston Farrand	Charles Zeleny (Minnesota Chapter)
Charles F. Chandler	Austin F. Rogers (Kansas Chapter)
John K. Rees	A. H. Blanchard (Brown Chapter)

The first meeting was held on December 19, 1902, in the library of the Department of Zoology. Almost all the signers of the petition were present and several additional officers or students of the University who were members of other chapters. The Charter which had been granted by the Council of the Society on December 1 was presented to the new group by Professor Edward L. Nichols of Cornell University, Chairman of the Council, and by him the Chapter was duly installed. The Chapter thereupon organized by electing the following officers:

President: James F. Kemp
Vice-President: Lucien M. Underwood
Recording Secretary: George Alfred Lawrence
Corresponding Secretary: Marston T. Bogert
Treasurer: William Hallock
Member of the Council: Henry E. Crampton

In the evening a dinner was given by the members of the Chapter in honor of Professor Edward L. Nichols who had installed the new branch of the Society.

In 1905 the Chapter appointed a committee to select representatives from former classes among the alumni to be recommended for membership in the Society. A conservative canvass was made which resulted in the Chapter electing forty-three alumni.

It is the custom of the Columbia Chapter to recruit its membership chiefly from senior classes in the Schools of Engineering and Chemistry, from graduate students in pure science and from the instructional staff in all scientific and engineering departments.

The Chapter has confined its regular activities to a few scientific meetings each year at which times some provision is usually made for a social hour. A good deal of care is taken in planning the initiation ceremonies and these have grown to be rather formal affairs. There are usually delegates from two or three neighboring chapters whose presence adds much to the dignity of the occasion. At the last initiation (1911) the Cornell, the University of Pennsylvania, and the Yale Chapters were represented.

At regular scientific meetings there is never more than one title on the program. The object is to secure the presentation of some investigation or research or a comprehensive summary of some special field. The following list will serve to indicate the scope of these discussions:

Protozoa and Disease by Professor Gary N. Calkins.

Radium and its Relations to the Structure of the Atom by Professor William Hallock.

The Panama Canal by Professor William H. Burr.

Perilous First Ascents in the Selkirks of British Columbia by Professor Herschel C. Parker.

Microscopic Examination of Opaque Substances by Professor William Campbell.

Use of Denatured Alcohol as a Fuel by Professor Charles E. Lucke.

A Zoologist's Visit to the Society Islands by Professor Henry E. Crampton.

Recent Aspects of Plant Breeding and Variation by Doctor George H. Shull.

Recent Improvements in Incandescent Lighting by Professor Herschel C. Parker and Mr. Walter G. Clark.

The Selective Reflection in the Infra-red Characteristic of Carbonates and its Relation to the Atomic Weights of the Bases by Doctor Leighton B. Morse.

Recent Progress in Electro-Chemistry by Professor Charles F. Chandler.

The Genesee River and its Bearing on the Problems of the Great Lakes by Professor Amandeus W. Grabau.

Modern Practice in Color Photography by Mr. Alfred Norton Goldsmith.

The Quebec and the Blackwell's Island Cantilever Bridges by Professor William H. Burr.

The Sanitary Protection of Tidal Waters by Doctor George A. Soper.

Exploratory Travels in the Olympic Mountains of Washington by Professor Herschel C. Parker.

Additional Water Supply from the Catskill Mountains by Professor William H. Burr.

Heredity and the Cell by Professor Edmund B. Wilson.

Electric Lighting of a Great City by Professor George F. Sever.

Many addresses of a less formal nature designed especially to add to the enjoyment or entertainment of the Chapter have been delivered in connection with the initiation ceremonies and other special occasions.

The Chapter is firmly established at Columbia. To be elected to its membership is considered a special honor. In an institution where there are so many other channels for announcing and publishing scientific investigations and where societies in every branch of science and engineering are maintained in active operation there has seemed to be no immediate call for Sigma Xi to undertake the burden of publication or to place much emphasis on the fostering of the scientific spirit. It is rather a scientific fellowship in which all branches and all interests unite and find encouragement.

CHICAGO CHAPTER

UNIVERSITY OF CHICAGO, CHICAGO, ILLINOIS

Charter Dated May 1, 1903

Chapter Installed May 8, 1903

HISTORICAL SKETCH

Steps leading to the organization of a Chapter of the Sigma Xi Society at the University of Chicago were taken early in December, 1902, as a result of a conference of resident members of the Society among the faculty and students of the University. The petition, signed by thirty-seven of the faculty, was transmitted by the President of the Society, who was one of the signers of the petition, to the Chairman of the Council in December. Unanimously recommended by the Council, it received the assent of the chapters, and the charter, duly signed by the President and Secretary, was received early in May. The first meeting, called by Professor Williston, was held on May 8, with nearly all the signers present, and President Harper of the University, who was an invited guest.

After the objects and aims of the Society, with a brief history of it, had been given by Professor Williston, and a few words of encouragement had been spoken by President Harper, officers of the Chapter were elected. A committee, composed of Professors Williston, Weller and Wells, was appointed to draft the by-laws of the Chapter. The report of the committee on by-laws was presented at a called meeting on May 22, with a large attendance of members, and others eligible for membership. Those of the faculty eligible for membership were invited to become charter members, all of whom accepted the invitation. The Chapter began its active membership with more than one hundred members, and has since never fallen below that number. Meetings are held quarterly, at which, attendance varies between sixty and one hundred. At these meetings it has been the invariable custom, after the transaction of necessary business, to listen to an address by some speaker of note, after which a social entertainment has been provided. From the beginning it has been the policy of the Chapter to admit only graduate students to membership, students who have actually accomplished or are doing research work of merit.

MICHIGAN CHAPTER

UNIVERSITY OF MICHIGAN, ANN ARBOR, MICHIGAN

Charter Dated May 26, 1903

Chapter Installed June 4, 1903

HISTORICAL SKETCH

The charter organizing this Chapter contains the names of thirty-five members of the faculty and graduates, who, as charter members, formed the nucleus of the present Chapter.

The first meeting of the new Chapter was held on June 4, 1903, at which Professor S. W. Williston, of Chicago, was present and formally installed the officers-elect. Since that time the Society has held three meetings annually for the transaction of business and for scientific addresses. It was not deemed desirable to have a larger number of meetings owing to the existence of an organization known as "The Research Club" which holds monthly meetings.

The first of the general addresses was given by Professor H. H. Donaldson, of Chicago, on March 24, 1904. The subsequent lectures have been May 19, 1904: Professor A. B. Prescott, on The Life of A. W. Hoffmann; December 14, 1904: Professor G. W. Patterson, on The Velocity of Sound; March 22, 1905: Professor E. W. Morley, Cleveland, on Recent Experiments on the Motion of the Earth Through the Luminiferous Ether; May 25, 1905: Professor F. G. Novy, on Recent Protozoal Researches; March 13, 1906: Professor W. F. Magie, Princeton, The Application of the Theory of Probabilities; May 15, 1906: Professor J. P. McMurrich, Recent Theories of Brain Functions; December 12, 1906: Professor W. J. Hussey, New Studies of the Stars; March 22, 1907: Professor W. E. Castle, Harvard, The Experimental Study of Heredity; May 2, 1907: Professor W. H. Hobbs, The Grand Eruption of Vesuvius in 1906; December 5, 1907: Professor M. E. Cooley, Some Street Railway Problems; April 24, 1908: Professor S. W. Williston, Chicago, The Development of the Elephant; May 22, 1908: Professor V. C. Vaughn, The Chemistry of the Living Cell; December 14, 1908: Professor Filibert Roth, Forest Fires; April 29, 1909: Professor A. W. Hewlett, Irregularities of the Heart; December 9, 1909: Professor Karl E. Guthe, The Method of Science; March 23, 1910: Baron Dairoku Kikuchi, The New Japan; its Moral and Intellectual Development; May 23, 1910: Doctor Robt. B. Bean, Filipino Types; December 7, 1910: Professor Jacob Reighard, Adaptation.

The total number of those initiated in the University of Michigan Chapter up to January 1, 1912, is 501. The resident members for the year 1910-1911 number 106.

ILLINOIS CHAPTER

UNIVERSITY OF ILLINOIS, URBANA, ILLINOIS.

Charter Dated Dec. 17, 1903

Chapter Installed May 16, 1904

HISTORICAL SKETCH

Application for a Charter for the establishment of a Chapter of Sigma Xi at the University of Illinois was made in the spring of 1903, and the Charter was granted December 17, 1903. The Illinois Chapter was organized February 10, 1904. The public installation of the Chapter was held on May 16, 1904, at which time Professor Samuel W. Williston, then President of the National Society, delivered an address on Scientific Research. What may well be called the first regular scientific meeting of the Chapter was held November 28, 1904, and since that time there have been held annually from four to eight regular scientific meetings. At these scientific meetings there are presented, in general, the results of investigations that have considerable general scientific interest.

One of the regular features of our Commencement Week Exercises at the University, since the Commencement of 1906, is the annual address given under the joint auspices of the chapters of Phi Beta Kappa and Sigma Xi.

The Illinois Chapter has not neglected altogether the social element in its meetings. After the more or less formal business or scientific part of a meeting refreshments are very often served and a social hour is enjoyed.

CASE CHAPTER

CASE SCHOOL OF APPLIED SCIENCE, CLEVELAND, OHIO

Charter Dated October 1, 1904 Chapter Installed November 21, 1904

HISTORICAL SKETCH

In the spring of 1904, through the efforts of Charles S. Howe, President of Case School of Applied Science, application was made for the establishment of a chapter of the Society of the Sigma Xi at Case School. The charter was granted under the date of October 1, 1904, for the "Case Chapter," no chapter letter being assigned. The Chapter was installed by a formal meeting for organization, held on November 21, 1904, there being sixteen members, all from the faculty of Case School of Applied Science.

Elections to active membership were made from the faculty, and from the senior class only at the end of the senior year. In the six years, from 1904 to 1910, sixty-three seniors have been elected, being thirteen per cent of the eligible seniors. From the alumni there have been elected forty-two; and faculty elections and transfers from other Chapters make the total Chapter enrollment one hundred and forty. In January, 1911, there were twenty-two active faculty members.

In the six and one-half years of Chapter life, there have been held thirty-six meetings, at sixteen of which there were scientific papers and discussions. The annual addresses, given at Commencement time, have been by Edward C. Orton, State Geologist of Ohio; President C. R. Van Hise of the University of Wisconsin; Doctor H. W. Wiley, Chief Chemist of the United States Department of Agriculture; Doctor L. O. Howard, Chief of the United State Bureau of Entomology; Doctor Dayton C. Miller of our Department of Physics; and Professor A. A. Michelson of the University of Chicago.

INDIANA CHAPTER

INDIANA UNIVERSITY, BLOOMINGTON, INDIANA

Charter Dated October 1, 1904

Chapter Installed, 1904

HISTORICAL SKETCH

During the fall of 1903, the Sigma Xi men of the faculty of Indiana University considered the advisability of petitioning the Council for a chapter at that institution and a petition was drawn up and presented to the Council at about the time of the St. Louis meeting of the American Association for the Advancement of Science. The charter was granted the first of October, 1904.

Since its organization the Society has had a healthy growth and has been of value in many ways to the scientific departments of the University. Its numbers have been increased gradually until now there are forty resident and thirty-four non-resident members.

Eight or nine scientific meetings are held each year. These meetings fall into three general groups: First, those in which the paper is a summary of recently completed research of the member; second, a discussion of the present status and recent advances in the knowledge of some limited field of science in which a member is working; third, general meetings, of which there are usually two, one devoted to the greater advancements of science during the year in the various departments and the other is turned over to the younger members, the candidates for advanced degrees giving ten or fifteen minute discussions of the researches upon which their theses are based. These general meetings are interesting and especially well attended.

A few members of the senior class who have already demonstrated their ability to do research work and the probability of their continuing it are elected early in the year in order that they may have as much advantage of the meetings as possible. These are usually men who complete the work for the bachelor's degree at the end of the fall or winter quarter, ending Christmas and the last week in March, respectively.

Regular membership application blanks similar to those in use by the Cornell Chapter have been adopted.

MISSOURI CHAPTER

UNIVERSITY OF MISSOURI, COLUMBIA, MISSOURI

Charter Dated April 3, 1905

Chapter Installed May 12, 1905

HISTORICAL SKETCH

The records of the Chapter show that the first steps toward organization were taken in the early months of 1904. At the call of Doctor O. M. Stewart (Cornell 1895), the Sigma Xi members then on the faculty met to consider the advisability of petitioning the Society for a charter. It appeared that the time was ripe for such action and accordingly a petition was drawn up and signed by its initiators and other members of the faculty whose names appear upon the charter. This petition received favorable action by the Society, and in March, 1905, the petitioners formed a temporary organization. By-laws were adopted at a meeting on April 3, and on the fourteenth of that month temporary officers were elected. The first annual meeting was held May 10, 1905, at which fifteen faculty members, nine resident graduates, seven undergraduates, and one alumni member were elected. The Chapter was formally installed soon after by Dean F. O. Marvin, Chairman of the Council of the Society, at the home of President and Mrs. A. Ross Hill. Since the organization of the Chapter, twenty-seven faculty members, twenty-five resident graduates, sixty-seven undergraduates, and one alumnus have been elected to membership. The active members number sixty-one at present.

The by-laws of the Chapter provide for at least one meeting each semester at which one or more scientific papers are to be presented. These open meetings have been a means of giving recognition and honor to members for important contributions to science. With a view of making this provision more effective the Chapter, four years ago, entered into an agreement with the Chapters at Kansas, Iowa, and Nebraska, by the terms of which the four Chapters joined in inviting a speaker to give the annual address at each of the Chapters. This co-öperative plan has solved the difficulty often experienced in securing as speakers prominent scientists living at a distance. Doctor Charles Sedgwick Minot delivered the annual address in 1907, and in the year 1908 the speaker was Doctor Russell H. Chittenden of Yale University; in 1909, Doctor Arthur Gordon Webster of Clark University; in 1910, Doctor Percival Lowell. In spring of 1910 delegates from the four Chapters met at Iowa City to consider a renewal and extension of the co-öperative plan of securing Sigma Xi addresses. To meet the varied interests of the different Chapters it seemed desirable to discontinue the circuit and to extend the plan by forming two or more circuits. Accordingly, the Chapters of Kansas, Missouri, and Washington University formed a new agree-

ment for a period of three years. The first season was successfully inaugurated last fall by Doctor Edmund B. Wilson of Columbia University, who gave two addresses before each of the Chapters.

During the *six full years* of its existence the Chapter has contributed materially towards stimulating original investigation in the sciences, and to bringing its members into closer relationships with each other. Election to membership in Sigma Xi has become an effective force in directing the footsteps of the undergraduate student toward the pathway of original investigation. In the near future we hope that the Chapter may devise and establish new ways and means of stimulating and encouraging worthy and promising students in becoming zealous workers in the fields of scientific research.

COLORADO CHAPTER

UNIVERSITY OF COLORADO, BOULDER, COLORADO.

Charter Dated April 3, 1905

Chapter Installed May 20, 1905

HISTORICAL SKETCH

Colorado Chapter of the Society of the Sigma Xi was organized April 1, 1905, although the Charter is dated April 3, 1905. The formal installation occurred May 20, 1905, Doctor Henry Baldwin Ward of the University of Nebraska conducting the ceremonies. The installation address on The Society of the Sigma Xi was later published in pamphlet form by the Chapter. In an open public meeting which followed, Doctor Ward delivered an address on The Role of Animals in the Transmission of Disease.

At the close of each academic year a public meeting has been held, with an address by some prominent outside speaker, as follows:

1906: Doctor Thomas H. McBride, of Iowa City, Iowa, on The Response of Plants.

1907: Doctor Regis Chauvenet, of Denver, Colorado, on The Uses and Dangers of Scientific Theories.

1908: Doctor Florian Cajori, of Colorado Springs, Colorado, on The History of a Doctrine.

In addition to these open meetings and the regular business meetings, the Chapter has held two or three meetings each year at which were read scientific papers based upon research work done by the members. Many papers written by members have appeared in various technical periodicals but only one has been published under the auspices of the Chapter as given below.

NORTHWESTERN CHAPTER

NORTHWESTERN UNIVERSITY, EVANSTON, ILLINOIS

Charter Dated January 17, 1906 Chapter Installed January 17, 1906

HISTORICAL SKETCH

The Northwestern Chapter of Sigma Xi was organized largely through the efforts of Professor Henry S. White, then Professor of Mathematics at Northwestern University and now at Vassar College. The first petition was signed by only nine persons but this was reinforced by a number of additional signatures and was finally sent to the general society about May 25, 1905.

The organization of the Chapter was authorized by President Edward L. Nichols, in a letter dated November 25, 1905. The preliminary organization was effected on December 1, 1905, with Professor Grant as Chairman. The installation of the chapter was made by President Nichols on the afternoon of January 17, 1906. The charter bears this date and contains the names of twenty-five charter members, in addition to whom four members were initiated at that time, whose names are not on the document. The date of installation was the two hundredth anniversary of the birth of Benjamin Franklin, and an appropriate celebration of this event was observed that evening. Professor J. A. James of Northwestern University gave an address on Franklin as a Diplomat, while President Nichols gave an address on *Is Investigation Worth While?* A reception was tendered by the University Guild.

At the first annual meeting, April 2, 1906, Professor Loey was elected President of the Chapter, and By-Laws were adopted. On April 6, 1906, Doctor George E. Hale gave an illustrated lecture on *The Work of the Carnegie Solar Observatory at Mt. Wilson*. At the initiation, June 13, 1906, Professor W. A. Loey delivered an address upon *Investigation*, illustrating it with work done the previous year in his department.

At the following initiation, December 19, 1906, Professor Jacob Reighard, of the University of Michigan, gave an address upon *Habits of Nest Building Fishes*. On January 25, 1907, Professor Crew and Professor Loey presented a careful discussion of the question *What Sciences Should be Required in a College Course*. On May 17, 1907, Professor Crew was elected President of the chapter, and the initiation occurred on May 24, 1907, on which occasion Professor Loey gave an address on *The Life of Linnaeus*, and his *Special Service to Natural History*. Professor Atwell also spoke upon *Linnaeus as a Botanist*.

On October 14, 1907, the subject of *Osmosis* was discussed from the points of view of Physics, Chemistry, Botany, and Zoology by Professors Tatnall, Young, Atwell, and Harper respectively. The next initiation took place November 22, with short addresses by members as follows:

J. H. Long, on Chemical Composition of Water; U. S. Grant, on Water as a Geological Agent; and O. H. Basquin, on Anchor and Frazil Ice. On February 19, 1908, Professor Cassius J. Keyser, of Columbia University, gave an address upon The Aims and Achievements of Modern Mathematicians. The initiation of members occurred on May 9, with a public address by John A. Brashear, Sc.D., LL.D., upon Some Problems in the Making of a Large Telescope.

In honor of the Darwin Centenary the chapter furnished a public lecture on February 19, 1909, by Professor E. G. Conklin of Princeton University, whose subject was the Life and Work of Charles Darwin. At the initiation on May 7, 1909, Mr. John F. Hayford of the Coast and Geodetic Survey, spoke upon the Work of the International Geodetic Association.

At the initiation, December 16, 1909, the program included a number of short papers:—Professor Grant, on Topographical and Geological Survey of Cook's Inlet, Alaska; Professor Crew, on Absorption of Light and Ionization; Professor Bauer, on A New Primary Battery; Professor Fox, on Spectra of Sun Spots; Professor Basquin, on Exponential Law of Endurance Tests. At the initiation, May 26, 1910, papers were given as follows:—Professor Fox, on Comets; Doctor Lewis, on The Pure Food Movement; Mr. E. V. Smith, on Spiral Ganglion Cells.

On December 1, 1910, a public lecture was given by Doctor D. T. MacDougal, of the Carnegie Institution, whose subject was American Deserts.

SYRACUSE CHAPTER

SYRACUSE UNIVERSITY, SYRACUSE, NEW YORK

Charter Dated May 18, 1906

Chapter Installed May 18, 1906

HISTORICAL SKETCH

The petition for the establishment of the Syracuse Chapter of Sigma Xi at Syracuse University was sent to the President of the general Society in the autumn of 1905. Upon receipt of the unanimous approval of the already existing chapters, fifteen members of the faculty of Syracuse University and one graduate student, a member of the Chapter at Brown University, met on May 9 and elected Professor William H. Metzler as the first President of the Syracuse Chapter. On the evening of May 18, 1906, at the University Club in the city of Syracuse, these fifteen charter members were formally installed as the Syracuse Chapter of Sigma Xi by President Nichols of the National Society, who gave a public address entitled, Does Research Pay?

Research papers were read before the Society by its own members during 1906 and 1907. Three open meetings were held during 1907 and 1908 with addresses by Professor Charles F. Binns, Director of the State School of Ceramic Arts, Alfred, N. Y.; Doctor B. W. Evermann of the Bureau of Fisheries, Washington, D. C.; and Professor C. B. Child, of Colgate University. The fourth meeting was devoted to research reports by the members of the Syracuse Chapter.

During the year 1908 and 1909 three meetings were held at which research reports were presented by various members of the faculty; and one open meeting in celebration of the Darwin Centenary. Papers were given as follows: Darwin and Zoology, Professor C. W. Hargitt; Darwin and Botany, Professor W. L. Bray; Darwin and Geology, Doctor John M. Clarke, State Geologist, Albany, N. Y.

Four meetings were held during the year 1909 and 1910, which were devoted to research reports from various members of the Chapter.

In 1910 and 1911 there have been three meetings; two devoted to research reports, and one open meeting in conjunction with the Syracuse Section of the American Chemical Society, which was addressed by Doctor Harvey W. Wiley, Chief Chemist of the Department of Agriculture, Washington, D. C., upon the Services of Chemistry to the Public Welfare.

PUBLICATIONS

The Chapter has published no reports as a Chapter, but many of its members have published research articles through their natural channels, since the organization of the Chapter in the spring of 1906. These publications are kept on file by the Secretary of the Chapter and will soon be placed in an alcove in the Carnegie Library of the University.

WISCONSIN CHAPTER

UNIVERSITY OF WISCONSIN, MADISON, WISCONSIN

Charter Dated January 18, 1907 Chapter Installed January 18, 1907

HISTORICAL SKETCH

The first concerted movement for the establishment of a chapter of Sigma Xi at the University of Wisconsin took place in October, 1906. There were then twenty-two members of Sigma Xi in the University faculty. These twenty-two men, together with twenty other members of the scientific faculty, petitioned the national organization for a charter in November of the same year. Word was received from President Nichols in December that favorable action had been taken by the various chapters upon the petition from the University of Wisconsin and the charter members were authorized to proceed with the organization of a Chapter of the Society at Wisconsin.

The Chapter was installed by President Nichols January 18, 1907, with a charter membership of forty-two.

The membership of the Society has been drawn from the University faculty and graduate students. No undergraduates have been admitted so far.

WASHINGTON CHAPTER

UNIVERSITY OF WASHINGTON, SEATTLE, WASHINGTON

Charter Dated January 4, 1907

Chapter Installed April 24, 1907

HISTORICAL SKETCH

On March 15, 1906, the Science Club, composed of twenty-six members of the faculty of the University of Washington, the state university located at Seattle, Washington, applied to the Society of Sigma Xi for a charter. The petition was acted upon favorably and President David Starr Jordan, of Leland Stanford, Junior, University installed the Chapter and presented the charter, his address on that occasion being upon *The Human Harvest*.

In June, 1910, Professor Alexander Smith of the University of Chicago delivered the annual address.

WORCESTER CHAPTER

WORCESTER POLYTECHNIC INSTITUTE, WORCESTER, MASSACHUSETTS

Charter Dated April 13, 1908

Chapter Installed May 7, 1908

HISTORICAL SKETCH

The Worcester Chapter was installed by President Edward L. Nichols, who delivered on that occasion a public address, his subject being Engineering a By-Product of Science. Eighteen members of the Faculty and instructional force were charter members.

Sixteen new members were initiated on June 12, and at this time the annual address was delivered by Professor Arthur G. Webster, of Clark University, the subject of which was The Object of Scientific Research.

In 1909, at a regular meeting of the Chapter on April 29, twenty-one new members were initiated. On the evening of June 9, at the annual meeting of the Chapter, an address was delivered by Professor George F. Swain, Director of the Department of Civil Engineering, Massachusetts Institute of Technology, on the subject of Research in Engineering.

Fifteen new members were initiated on April 27, 1910. The address at the annual meeting of June 8, following, was delivered by Doctor A. D. Risteen, taking as his subject What Things are Worth Doing?

PURDUE CHAPTER

PURDUE UNIVERSITY, LAFAYETTE, INDIANA

Charter Dated April 28, 1909 Chapter Installed December 21, 1909

HISTORICAL SKETCH

The formal petition for the establishment of a chapter of Sigma Xi at Purdue University was filed April 27, 1908, and bore the signatures of twenty-one members of the faculty, twelve of whom had been members of the organization in other institutions. The charter was issued April 28, 1909, and the Chapter was formally installed by Professor Henry B. Ward on December 21, 1909. Previous to the installation of the Chapter, four of those signing the original petition had severed their connection with the University. Since its organization the Purdue Chapter has maintained two public meetings each semester, one of the meetings being addressed by a member of the local Chapter, the other by a member from some other institution.

WASHINGTON UNIVERSITY CHAPTER

WASHINGTON UNIVERSITY, ST. LOUIS, MISSOURI

Charter Dated May 21, 1910

Chapter Installed June 4, 1910

HISTORICAL SKETCH

In the fall of 1908 the members of Sigma Xi on the faculty of Washington University held a meeting to discuss the advisability of asking for the establishment of a chapter of the Society of the Sigma Xi at the University. As the outcome of this conference a petition was sent to the President of Sigma Xi on December 18, 1908. Just one year later the formal application was presented to the Chairman of the Council, and on May 21, 1910, a letter was received from the President and Dean F. O. Marvin, saying that the last required vote had been received on that day and asking our pleasure in regard to the installation. An invitation was immediately tendered to Dean Marvin to honor us by his presence and to conduct the installation on June 4. Finally, after a dinner served at the Washington Hotel, the Chapter was duly installed.
